**Re: Implemented Corrective Measures – Groundwater Recovery and Treatment System  
Semi-Annual Post Closure Monitoring Report**  
Former Amphenol Facility #IND 044 587 848  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Thomas:

This Implemented Corrective Measures – Groundwater Recovery and Treatment System (ICM-GRTS) Report is submitted on behalf of the “Respondents”, Franklin Power Products, Incorporated and Amphenol Corporation. This report summarizes the “Work Efforts” completed during the second semi-annual period (April 20, 2012 through October 19, 2012) of the calendar year 2012. The “Work Efforts” were conducted pursuant to Section VIII of the Administrative Order on Consent for Corrective Measures Implementation (CMI) for the above referenced site and in accordance with the approved Post Closure Monitoring Work Plan submitted to the USEPA in March 2000.

The “Work Efforts” performed at the site included:

- Operations and Maintenance of the Groundwater Recovery and Treatment System
- Groundwater Elevation Monitoring
- Quarterly Sampling and Analysis of the Groundwater Recovery and Treatment System
- Semi-Annual Groundwater Sampling and Analysis

**Groundwater Recovery and Treatment System – Operations and Maintenance**

The Implemented Corrective Measure (ICM) at the site is a groundwater pump and treat system consisting of 5 recovery wells (RW-1 through RW-5). Recovery wells RW-1, RW-2, and RW-3 have 5 foot screened intervals at depths of approximately 15 to 20 ft BGS and 2 foot sumps. Recovery well RW-4 has a 10 foot screened interval at a depth of approximately 13 to 23 ft BGS and a 4-foot sump. An additional recovery well (RW-5) was installed in June 2010 and activated in July 2010 in conjunction with supplemental bioremediation activities being completed at the site. Recovery well RW-5 has a 10 foot screened interval at a depth of approximately 14 to 24 feet BGS and a 2-foot sump. Electric submersible pumps are used to pump groundwater from the recovery wells to an air stripper where volatile organic compounds (VOCs) are volatilized and exhausted to the atmosphere. Groundwater effluent from the air stripper is discharged to the City of Franklin municipal sanitary sewer system. In addition to VOC removal, the ICM is designed to lower the potentiometric groundwater surface to below the level of the existing storm sewer invert.

To ensure proper performance of the groundwater recovery and treatment system, IWM Consulting Group, LLC (IWM) personnel conducted routine operation and maintenance (O&M) inspections. Bi-weekly O&M duties include measurement of influent flow rates, measurement of groundwater elevations of the recovery wells, routine inspections and necessary repairs of influent and effluent lines, and air stripper maintenance. On a monthly basis, depth to groundwater is recorded in monitoring wells IT-2, IT-3, MW-3, MW-9, MW-12R, MW-20, MW-21, MW-22, MW-24, MW-26, MW-27, MW-28, MW-29, MW-30, and recovery wells RW-1 through RW-5. The air stripper trays and effluent discharge line are inspected and cleaned as necessary during monthly O&M activities. Also, influent sediment filters are replaced monthly. Quarterly O&M activities include complete disassembly and cleaning of the air stripper trays and sump. The sequestering agent system is also maintained on a quarterly basis. The air stripper blower lubrication and integrity is inspected on a quarterly basis. All recovery well pumps are also removed and cleaned on a quarterly basis. Monthly O&M reports are attached in **Appendix A**.

During this reporting period (April 20, 2012 through October 19, 2012), approximately 7,268,290 gallons of groundwater were recovered, treated, and discharged. The combined average influent flow rate for the period was 27.7 gpm. To date, approximately 173,521,218 gallons have been recovered. Groundwater recovery rates to date are provided in **Table 1**.

Overall the groundwater recovery and treatment system was very reliable and was operational during the majority of this reporting period. However, the following operational issues were encountered:

IWM personnel mobilized to the site on June 26, 2012 to complete bi-weekly system operation and maintenance activities. A crack was observed in the groundwater recovery line at the top of the well head to recovery well RW-1. Recovery well RW-1 was deactivated, the cracked PVC piping was replaced, and the recovery well was restarted. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on June 26, 2012.

IWM personnel mobilized to the site on September 21, 2012 to complete bi-weekly system operation and maintenance activities. Upon inspection, it was discovered that the pump in recovery well RW-4 was dysfunctional. IWM personnel replaced the pump in RW-4 and re-started groundwater recovery operations from RW-4. The groundwater recovery and treatment system was completely operational upon departure from the site on September 21, 2012.

### **Groundwater Level Measurements**

On a monthly basis, IWM personnel gauge select monitoring wells (IT-2, IT-3, MW-3, MW-9, MW-12R, MW-20, MW-21, MW-22, MW-23, MW-24, MW-26, MW-27, MW-28, MW-29, and MW-30) at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. For this semi-annual reporting period, depth to water in the monitoring wells ranged from 6.59 feet below top of casing (TOC) in MW-9 to 18.87 feet below TOC in MW-22. During this reporting period, neither LNAPL nor DNAPL were detected within the monitoring and recovery well network at the site. Additionally, the water table has raised approximately 1.57 feet from April 2012 to October 2012. The groundwater elevation data indicates that the groundwater recovery and treatment system maintains hydraulic control of the dissolved VOC plume. **Figure 1** is a site plan illustrating pertinent site features and well locations. A groundwater elevation contour map based on the most recent gauging event (October 5, 2012) is provided as **Figure 2**. Historic groundwater elevation data and groundwater contour maps for this reporting period are provided in each monthly O&M report included in **Appendix A**. Groundwater elevations during this semi-annual reporting period are provided in **Table 2**.

### **Quarterly Treatment System Sampling and Analysis**

On May 22, 2012, influent samples from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 and a combined effluent sample were obtained to evaluate the groundwater treatment system. Each of the influent sample taps was allowed to run for at least 10 seconds. Prior to sampling, water flow from the tap was reduced to minimize turbulence and agitation. All samples were submitted to Pace Analytical Services, Inc. (Pace), located in Indianapolis, Indiana for VOC analysis by SW-846 Method 8260B.

Laboratory analytical results from the May 22, 2012 quarterly system sampling activities indicated the presence of 1,1,1-trichloroethane and trichloroethene in groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. 1,1-Dichloroethane was detected in the groundwater samples obtained from recovery wells RW-2 and RW-3. Cis-1,2-dichloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, and RW-5. Tetrachloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, RW-4, and RW-5. No constituents of concern were detected in the remedial system's effluent water sample.

On August 24, 2012, influent samples from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 and a combined effluent sample were obtained to evaluate the groundwater treatment system. Each of the influent sample taps was allowed to run for at least 10 seconds. Prior to sampling, water flow from the tap was reduced to minimize turbulence and agitation. All samples were submitted to Pace, located in Indianapolis, Indiana for VOC analysis by SW-846 Method 8260B.

Laboratory analytical results from the August 24, 2012 quarterly system sampling activities indicated the presence of tetrachloroethene in the groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. 1,1-Dichloroethane was detected in the groundwater samples obtained from recovery wells RW-3 and RW-5. Cis-1,2-dichloroethene, 1,1,1-trichloroethane, and trichloroethene were detected in the groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. No constituents of concern were detected in the remedial system's effluent water sample.

The analytical reports for the quarterly system sampling events are included in **Appendix B**. A summary of quarterly system sampling results is included in **Table 3**.

### **Semi-Annual Groundwater Sampling and Analysis**

On October 5, 2012, groundwater samples were obtained from monitoring wells IT-2, IT-3, MW-12R, MW-20, MW-22, MW-28, MW-29, and MW-30 for VOC analysis to evaluate current groundwater quality at the site. Groundwater samples were collected using dedicated, disposable, bottom-loading bailers to reduce the risk of cross-contamination. Three-well volumes were purged prior to sample collection. Samples were submitted to Pace for VOC analysis using US EPA SW 846 Method 8260B. Groundwater sampling logs are provided in **Attachment C**.

The highest VOC concentrations were detected in the groundwater samples obtained from monitoring well MW-22 (905.3 µg/L total VOCs) located 30 feet northwest of recovery well RW-3 and monitoring well MW-12R (890.6 µg/L total VOCs) located adjacent to recovery well RW-2. Therefore, the groundwater recovery and treatment system is effectively targeting the area of greatest VOC concentration. The concentrations of dissolved VOCs in monitoring wells MW-12 and MW-22 decreased substantially following installation of the groundwater recovery and treatment system in 1996. Overall, total VOC

concentrations in these wells have been relatively stable during operation of the treatment system from 2000 to 2012.

Trichloroethene was detected in monitoring wells IT-2, IT-3, MW-12R, MW-22, MW-28, and MW-30. Cis-1,2-dichloroethene was detected in monitoring wells IT-2, MW-12R, and MW-22. 1,1,1-Trichloroethane was detected in monitoring wells IT-2, IT-3, MW-12R, MW-22, MW-28, and MW-30. Tetrachloroethene was detected in monitoring wells MW-12R, MW-20, MW-22, and MW-28.

Both monitoring wells IT-2 and IT-3 are located down-gradient from the site. Overall, total dissolved VOC concentrations in monitoring wells IT-2 and IT-3 have decreased over time during operation of the groundwater recovery and treatment system. Total dissolved VOC concentrations in monitoring wells MW-12/12R and MW-30 have decreased since the startup of the remedial system in 1996. Total dissolved VOC concentrations decreased substantially in monitoring wells MW-22 and MW-28 during the initial startup of the recovery system in 1996 and have been decreasing during operation of the groundwater recovery and treatment system from 2000 to 2012. Tetrachloroethene and trichloroethene concentrations were reduced significantly (47% and 37%, respectively) in monitoring well MW-22 as part of a three month enhanced bioremediation pilot study conducted in early 2007. During the implementation of the full scale enhanced bioremediation activities (July 2010 through March 2011), tetrachloroethene concentrations decreased an additional 22% in monitoring well MW-22. Post full scale enhanced bioremediation activities, tetrachloroethene concentrations have decreased an additional 32% in monitoring well MW-22.

The dissolved VOC concentrations observed in monitoring well MW-12R initially (October 2010) increased immediately after implementation of the full scale enhanced bioremediation. The reason for the increased dissolved VOC concentrations appears to be because several combination groundwater and microbe injection points (IN-4, IN-5, IN-6, and IN-7) were installed immediately hydraulically up-gradient from this well and the injection points were able to “flush” the VOC impacted saturated soil, thus increasing the dissolved VOC concentrations while simultaneously decreasing the adsorbed VOC concentrations. Furthermore, the dissolved VOCs were drawn to and recovered by hydraulically down-gradient recovery wells RW-2 (adjacent to MW-12R) and RW-5 (approximately 45 feet west of MW-12R). Since monitoring well MW-12R is located between these two recovery wells, this explains why the dissolved VOC concentrations increased immediately after start-up of the full scale enhanced bioremediation activities. It should be noted that the dissolved VOCs displayed a decrease in concentrations during the April 2011 groundwater sampling event. During the October 2011 event, a substantial rebound of dissolved VOC concentrations was observed, however the dissolved VOC concentrations in monitoring well MW-12R decreased approximately 72% from the October 2011 sampling event when compared to the October 2012 sampling event.

Hydraulically upgradient well MW-20 had a detectable concentration of tetrachloroethene during the October 2012 sampling event. This is the first time tetrachloroethene has been detected in MW-20. Additional groundwater samples will continue to be obtained on a semi-annual basis and a determination will be made in the future regarding the long term trend of the tetrachloroethene.

No VOCs were detected in the groundwater samples obtained from monitoring well MW-29.

A trip blank and a field duplicate sample (MW-22) were obtained per IDEM Minimum Data Documentation Requirements dated February 13, 2003. The trip blank and the duplicate sample were analyzed for VOCs. The trip blank was below laboratory detection limits for all constituents and the duplicate analysis was relatively consistent with the sample which was duplicated. Groundwater sampling field logs are provided

in **Appendix C**. Laboratory data sheets are provided in **Appendix D**. A summary of groundwater analytical results is included in **Table 4**.

### **Conclusions**

Based on the data collected during this semi-annual post closure monitoring period, the following conclusions can be asserted:

1. The groundwater recovery and treatment system maintains hydraulic control of the dissolved VOC plume.
2. The cone of influence developed by the on-site recovery wells extends beyond the downgradient site property boundary.
3. The average combined influent rate for the groundwater recovery system is approximately 27.7 gpm.
4. The highest dissolved PCE concentrations were detected near the suspected release area where the sanitary sewer crosses the existing storm sewer.
5. The highest VOC concentrations were detected in the groundwater samples obtained from monitoring wells MW-22 and MW-12R, located adjacent to recovery wells RW-3 and RW-2, respectively. Therefore, the groundwater recovery and treatment system is effectively targeting the area of greatest VOC concentrations.
6. Following activation of the groundwater recovery and treatment system, total dissolved VOC concentrations decreased substantially. Since initial startup of the remedial system, total VOC concentrations have displayed decreasing trends in monitoring wells IT-2, IT-3, MW-12/12R, MW-22, MW-28, and MW-30.
7. A full-scale implementation of enhanced bio-remediation activities were initiated in July 2010. As part of enhanced bio-remediation corrective actions, one recovery well (RW-5) and five additional injection wells (IN-3 through IN-7) were installed at the site. The recovery well was activated in July 2010. The injection of oxygenated water with intermittent microbe injection activities were also initiated in late July 2010. Immediately following the completion of the full scale enhanced bioremediation activities in March 2011, tetrachloroethene concentrations were reduced 16% (MW-21), 68% (MW-22), 42% (ASI-1), 73% (ASI-2), 19% (MON-1), 26% (MON-2), 69% (RW-2), 64% (RW-3), 40% (RW-5), 78% (IN-1), 89% (IN-2), 76% (IN-3), 75% (IN-4), 25% (IN-5), and 76% (IN-7). The injection activities were ceased in March 2011 and a determination will be made in the future regarding additional enhanced bio-remediation activities.

**Notes:**

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

Notes:

Results in micrograms per liter (ug/l).

(1) ND - Not Detected - analyte not detected above laboratory method detection limit.

(2) NS - Not Sampled, RW-1 not in operation during April 1996 and November 1997 sampling events.

E - Trichloroethane value for RW-1 during the November 13, 1998 sampling event is an estimated value only.

Notes:

Results in micrograms per liter (ug/L).

\* - Naphthalene and MTBE were detected at 18 and 17 ug/L, respectively; however, these detections are most likely due to laboratory artifacts or handling issues.

\*\* - Methylene chloride was detected at 5.9 ug/L, however, this detection was most likely due to a laboratory artifact.

Notes:

Results in micrograms per liter (ug/l).

ND - Not Detected - analyte not detected above laboratory method detection limit of 5.0 ug/L.

Samples were analyzed for VOCs using USEPA Method 8260 B.

NA - Not Available.

J - Estimated value.

Notes:

Results in micrograms per liter (ug/l).

ND - Not Detected - analyte not detected above laboratory method detection limit of 5.0 ug/L.

Samples were analyzed for VOCs using USEPA Method 8260 B.

NA - Not Available.

J - Estimated value.

**APPENDIX A**

**Monthly O&M Reports**

7428 Rockville Road, Indianapolis, IN 46214

May 21, 2012

Mr. Sam Waldo  
Director, Environmental Affairs  
AMPHENOL CORPORATION  
World Headquarters  
358 Hall Avenue  
Wallingford, CT 06492

**Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE**  
Former Amphenol Facility  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the April 20 through May 16, 2012 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

#### **Groundwater Level Measurements**

On May 2, 2012, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 6.56 feet below top of casing (TOC) in MW-9 to 17.19 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a groundwater contour map based on the May 2, 2012 depth to water measurements has been included as **Figure 2**.

#### **Groundwater Treatment System**

From April 20 through May 16, 2012, approximately 1,210,335 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 167,463,263 gallons. The average influent groundwater recovery rate from April 20 through May 16, 2012 was approximately 32.3 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on May 2, 2012 to complete quarterly, monthly, and bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on May 2, 2012.

Operation & Maintenance of the Implemented Corrective Measure  
Former Amphenol Facility  
Franklin, Indiana  
Page 2 of 2

---

IWM personnel mobilized to the site on May 16, 2012 to complete bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on May 16, 2012.

**Schedule of Activities**

Monthly and biweekly system operation and maintenance activities are scheduled for the month of June 2012. Site visits are scheduled for the weeks beginning May 28, June 11, and June 25, 2012. The information from these site inspections will be included in the June 2012 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting Group, LLC appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

**IWM CONSULTING GROUP, LLC**

Christopher D. Parks, LPG  
Project Manager

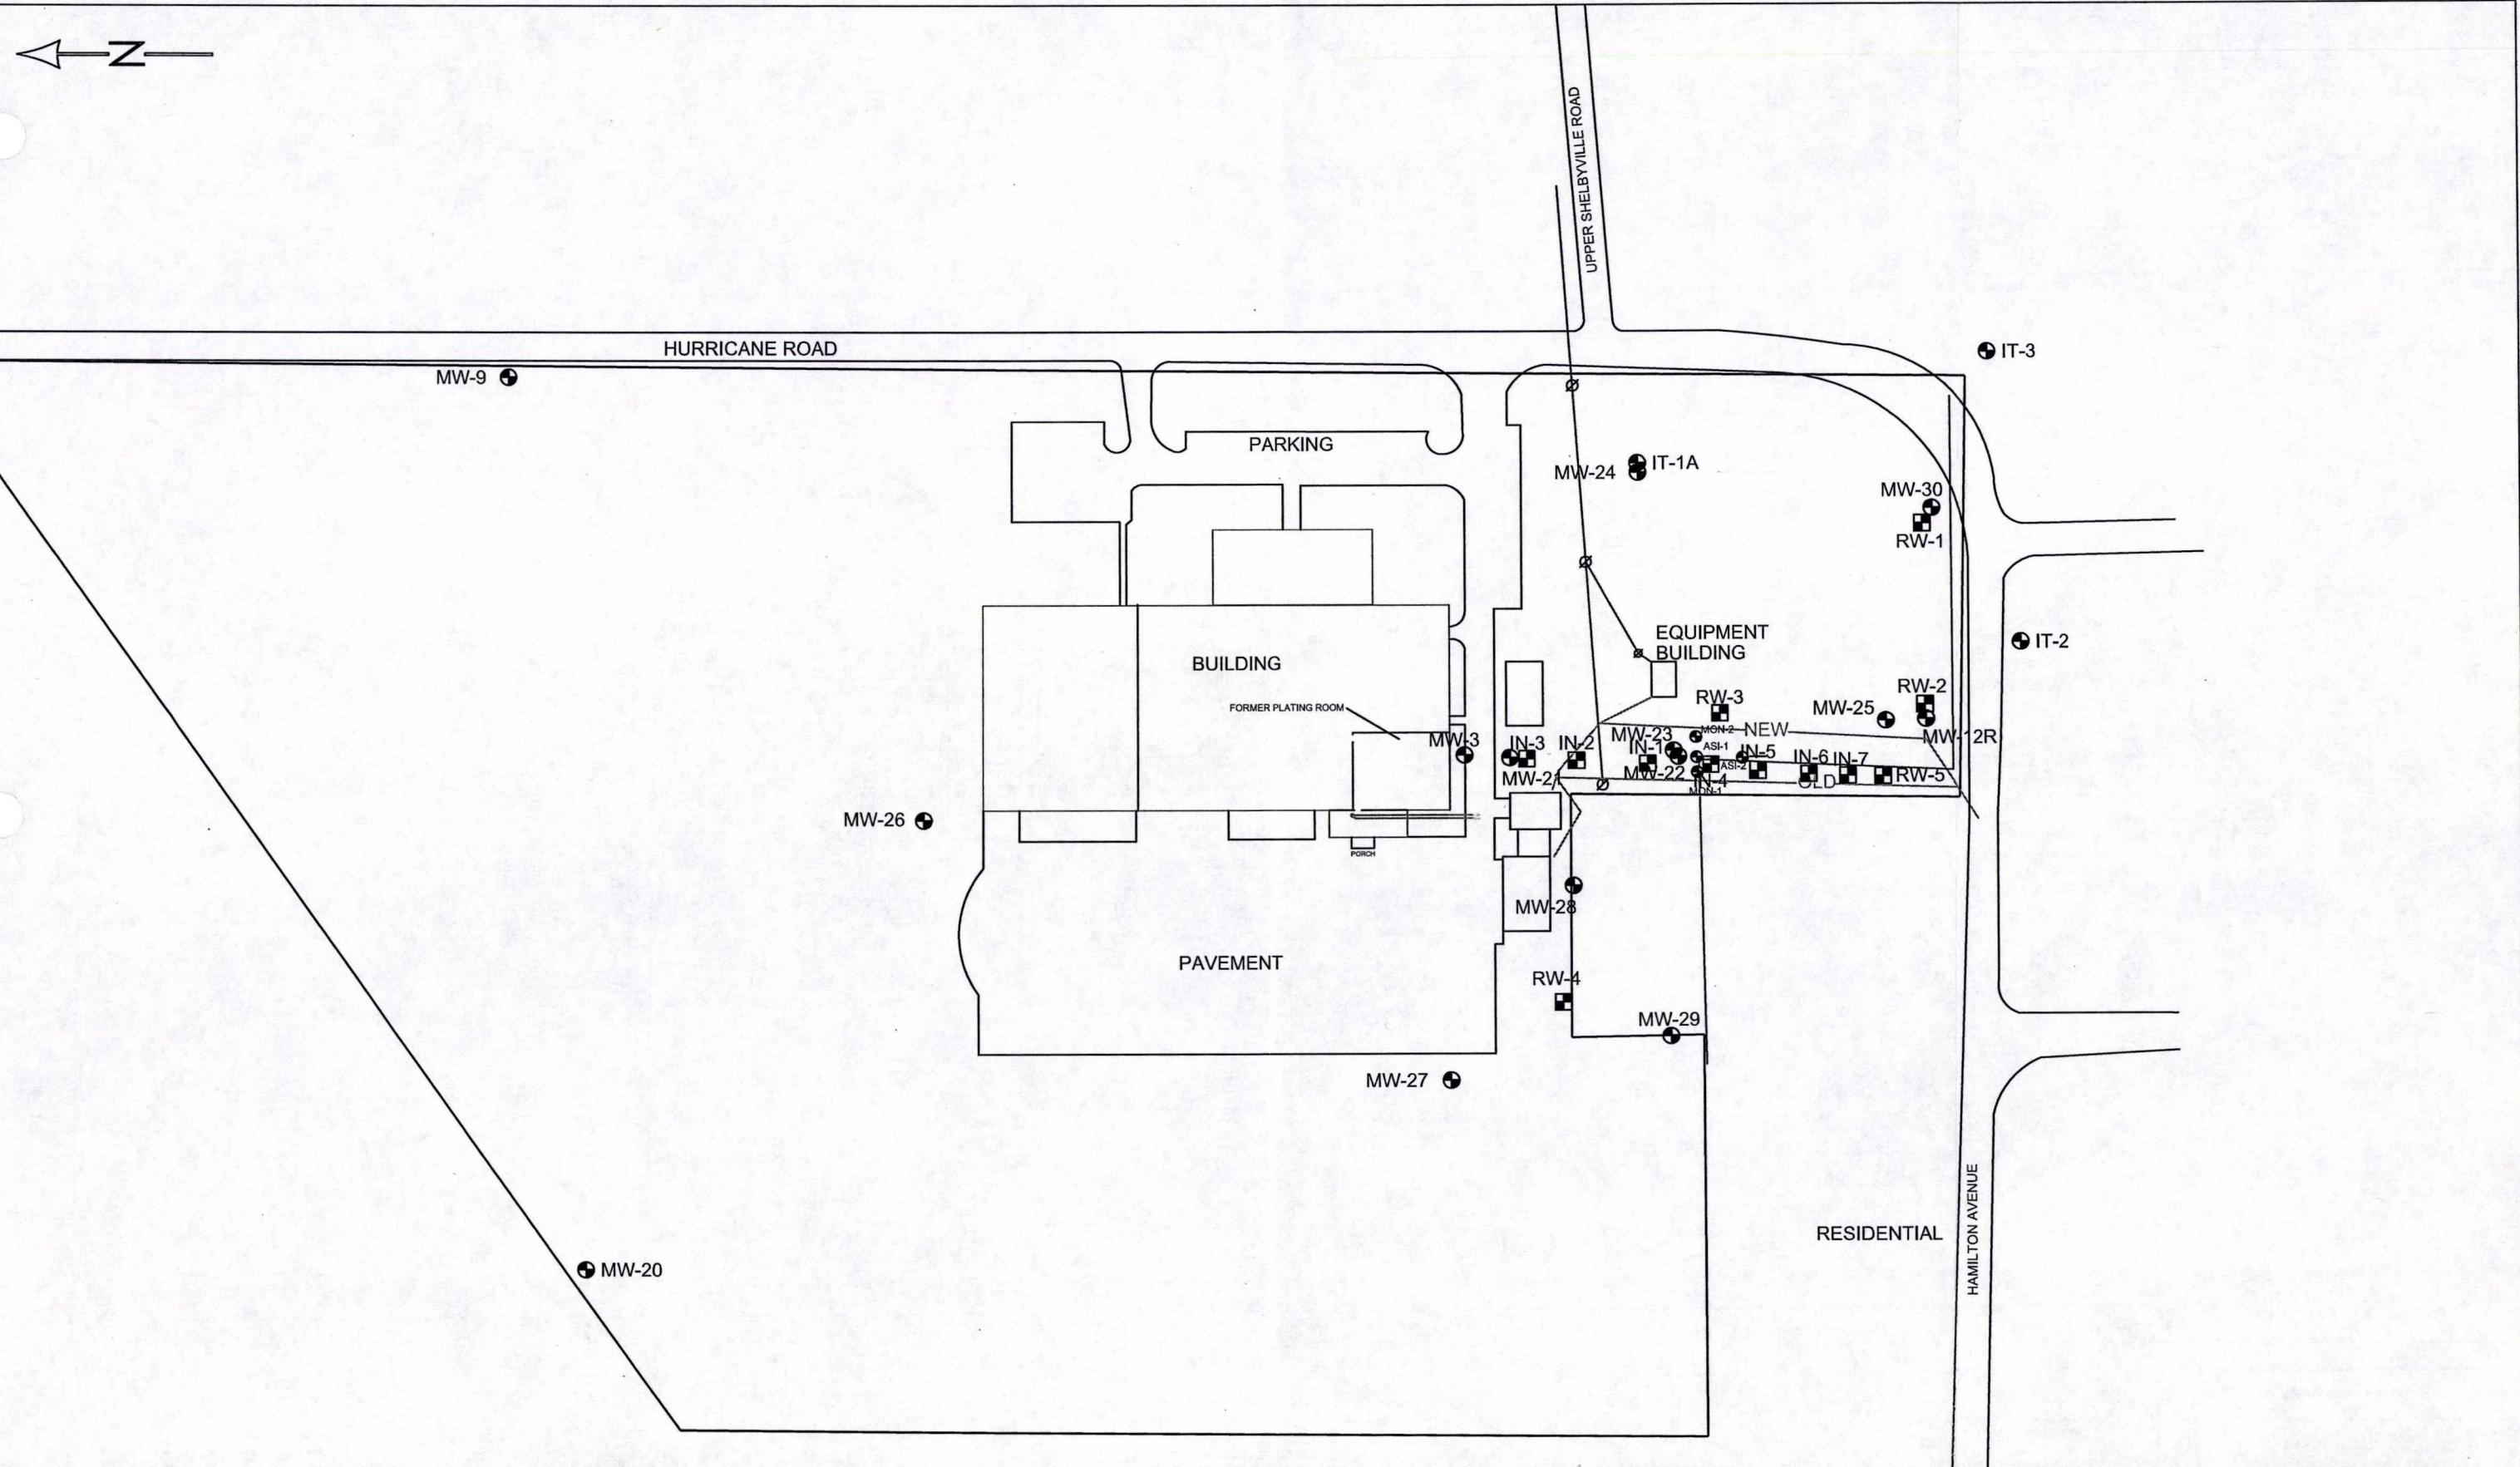

Bradley E. Gentry, LPG  
Senior Project Manager

**Notes:**

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

**Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE**  
Former Amphenol Facility  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the May 16 through June 26, 2012 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

#### **Groundwater Level Measurements**

On June 1, 2012, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 8.58 feet below top of casing (TOC) in MW-9 to 18.87 feet below TOC in MW-12R. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a groundwater contour map based on the June 1, 2012 depth to water measurements has been included as **Figure 2**.

#### **Groundwater Treatment System**

From May 16 through June 26, 2012, approximately 1,808,738 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 169,272,001 gallons. The average influent groundwater recovery rate from May 16 through June 26, 2012 was approximately 30.6 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on May 22, 2012 to complete quarterly system sampling activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on May 22, 2012.

Operation & Maintenance of the Implemented Corrective Measure  
Former Amphenol Facility  
Franklin, Indiana  
Page 2 of 3

---

IWM personnel mobilized to the site on June 1, 2012 to complete bi-weekly and monthly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on June 1, 2012.

IWM personnel mobilized to the site on June 14, 2012 to complete bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on June 14, 2012.

IWM personnel mobilized to the site on June 26, 2012 to complete bi-weekly system operation and maintenance activities. A crack was observed in the groundwater recovery line at the top of the well head to recovery well RW-1. Recovery well RW-1 was deactivated, the cracked PVC piping was replaced, and the recovery well was restarted. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on June 26, 2012.

#### **Quarterly Treatment System Sampling**

On May 22, 2012, influent samples from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 and a combined effluent sample were obtained to evaluate the groundwater treatment system. Each of the influent sample taps was allowed to run for at least 10 seconds. Prior to sampling, water flow from the tap was reduced to minimize turbulence and agitation. All samples were submitted to Pace Analytical Services, Inc. (Pace), located in Indianapolis, Indiana for volatile organic compound (VOC) analysis by SW-846 Method 8260B.

Laboratory analytical results from the May 22, 2012 quarterly system sampling activities indicated the presence of 1,1,1-trichloroethane and trichloroethene in groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. 1,1-Dichloroethane was detected in the groundwater samples obtained from recovery wells RW-2 and RW-3. Cis-1,2-dichloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, and RW-5. Tetrachloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, RW-4, and RW-5. No constituents of concern were detected in the remedial system's effluent water sample.

Historic quarterly system sampling analytical results are summarized in **Table 1**. Laboratory data sheets are provided in **Attachment D**.

#### **Schedule of Activities**

Monthly and biweekly system operation and maintenance activities are scheduled for the month of July 2012. Site visits are scheduled for the weeks beginning July 9 and July 23, 2012. The information from these site inspections will be included in the July 2012 Progress Report.

Notes:

Results in micrograms per liter (ug/l).

(1) ND - Not Detected - analyte not detected above laboratory method detection limit.

(2) NS - Not Sampled, RW-1 not in operation during April 1996 and November 1997 sampling events.

E - Trichloroethane value for RW-1 during the November 13, 1998 sampling event is an estimated value only.

Notes:

Results in micrograms per liter (ug/L).

\* - Naphthalene and MTBE were detected at 18 and 17 ug/L, respectively; however, these detections are most likely due to laboratory artifacts or handling issues.

\*\* - Methylene chloride was detected at 5.9 ug/L, however, this detection was most likely due to a laboratory artifact.

**Notes:**

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

RE: Project: Amphenol IN-AMP-11-05  
Pace Project No.: 5063292

Dear Mr. Parks:

Enclosed are the analytical results for sample(s) received by the laboratory on May 22, 2012. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Kenneth Hunt".

## QUALIFIERS

Project: Amphenol IN-AMP-11-05

Pace Project No.: 5063292

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

Mr. Sam Waldo  
Director, Environmental Affairs  
AMPHENOL CORPORATION  
World Headquarters  
358 Hall Avenue  
Wallingford, CT 06492

**Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE**  
Former Amphenol Facility  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the June 26 through July 27, 2012 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

#### **Groundwater Level Measurements**

On July 13, 2012, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 9.90 feet below top of casing (TOC) in MW-9 to 18.29 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a groundwater contour map based on the July 13, 2012 depth to water measurements has been included as **Figure 2**.

#### **Groundwater Treatment System**

From June 26 through July 27, 2012, approximately 1,232,507 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 170,504,508 gallons. The average influent groundwater recovery rate from June 26 through July 27, 2012 was approximately 27.6 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on July 13, 2012 to complete bi-weekly and monthly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on July 13, 2012.

Operation & Maintenance of the Implemented Corrective Measure  
Former Amphenol Facility  
Franklin, Indiana  
Page 2 of 2

---

IWM personnel mobilized to the site on July 27, 2012 to complete bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on July 27, 2012.

**Schedule of Activities**

Quarterly, monthly, and biweekly system operation and maintenance activities and quarterly system sampling activities are scheduled for the month of August 2012. Site visits are scheduled for the weeks beginning August 6 and August 20, 2012. The information from these site inspections will be included in the August 2012 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting Group, LLC appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

**IWM CONSULTING GROUP, LLC**

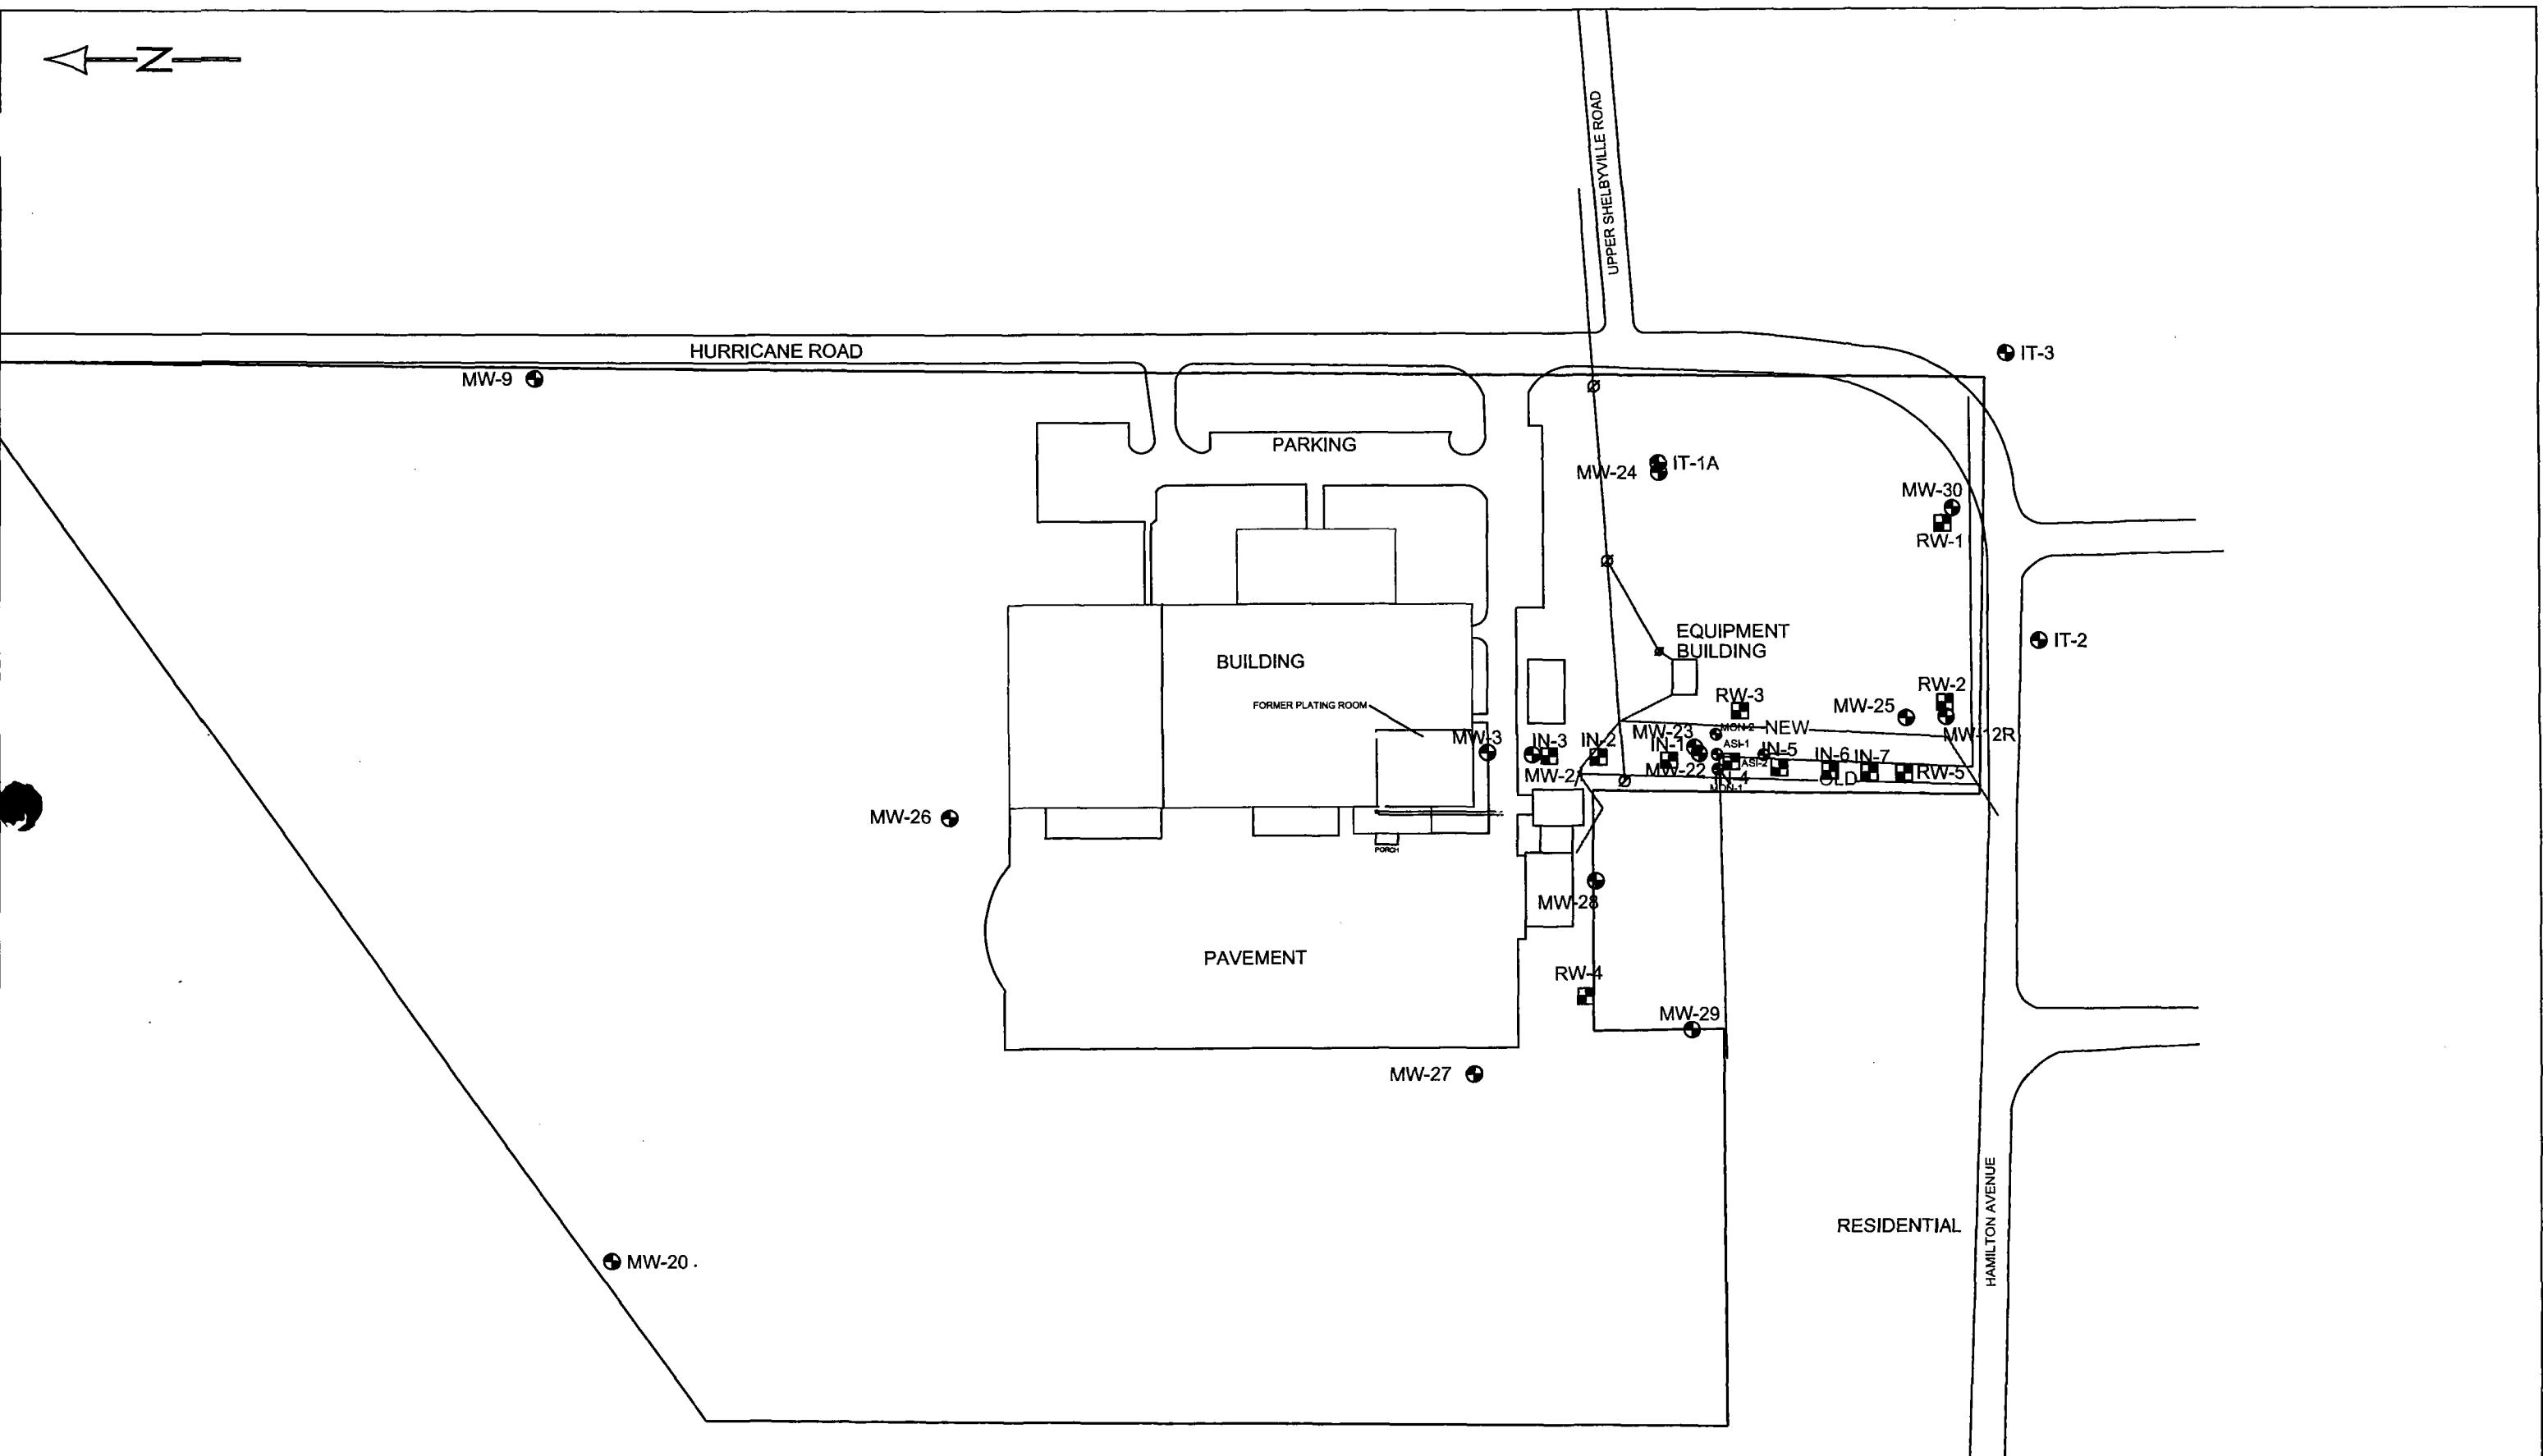

Christopher D. Parks, LPG  
Project Manager

Bradley E. Gentry, LPG  
Senior Project Manager

**Notes:**

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

**Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE**  
Former Amphenol Facility  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the July 27 through August 24, 2012 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

#### **Groundwater Level Measurements**

On August 10, 2012, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 10.42 feet below top of casing (TOC) in MW-9 to 18.76 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a groundwater contour map based on the August 10, 2012 depth to water measurements has been included as **Figure 2**.

#### **Groundwater Treatment System**

From July 27 through August 24, 2012, approximately 1,062,193 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 171,566,701 gallons. The average influent groundwater recovery rate from July 27 through August 24, 2012 was approximately 26.3 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on August 10, 2012 to complete bi-weekly, monthly, and quarterly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on August 10, 2012.

Operation & Maintenance of the Implemented Corrective Measure  
Former Amphenol Facility  
Franklin, Indiana  
Page 2 of 2

IWM personnel mobilized to the site on August 24, 2012 to complete bi-weekly system operation and maintenance activities and quarterly system sampling activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on August 24, 2012.

**Quarterly Treatment System Sampling**

On August 24, 2012, influent samples from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 and a combined effluent sample were obtained to evaluate the groundwater treatment system. Each of the influent sample taps was allowed to run for at least 10 seconds. Prior to sampling, water flow from the tap was reduced to minimize turbulence and agitation. All samples were submitted to Pace Analytical Services, Inc. (Pace), located in Indianapolis, Indiana for volatile organic compound (VOC) analysis by SW-846 Method 8260B.

Laboratory analytical results from the August 24, 2012 quarterly system sampling activities indicated the presence of tetrachloroethene in the groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. 1,1-Dichloroethane was detected in the groundwater samples obtained from recovery wells RW-3 and RW-5. Cis-1,2-dichloroethene, 1,1,1-trichloroethane, and trichloroethene were detected in the groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. No constituents of concern were detected in the remedial system's effluent water sample.

Historic quarterly system sampling analytical results are summarized in **Table 1**. Laboratory data sheets are provided in **Attachment D**.

**Schedule of Activities**

Monthly and biweekly system operation and maintenance activities are scheduled for the month of September 2012. Site visits are scheduled for the weeks beginning September 3 and September 17, 2012. The information from these site inspections will be included in the September 2012 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting Group, LLC appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

**IWM CONSULTING GROUP, LLC**

Christopher D. Parks, LPG

Notes:

Results in micrograms per liter (ug/l).

(1) ND - Not Detected - analyte not detected above laboratory method detection limit.

(2) NS - Not Sampled, RW-1 not in operation during April 1996 and November 1997 sampling events.

E - Trichloroethane value for RW-1 during the November 13, 1998 sampling event is an estimated value only.

Notes:

\* - Results in micrograms per liter (ug/l).

\* - Naphthalene and MTBE were detected at 18 and 17 ug/L, respectively; however, these detections are most likely due to laboratory artifacts or handling issues.

\*\* - Methylene chloride was detected at 5.9 ug/L, however, this detection was most likely due to a laboratory artifact.

**Notes:**

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

RE: Project: Amphenol  
Pace Project No.: 5068122

Dear Mr. Parks:

Enclosed are the analytical results for sample(s) received by the laboratory on August 24, 2012. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read 'Kenneth Hunt'.

## QUALIFIERS

Project: Amphenol  
Pace Project No.: 5068122

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

L3      Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

M0      Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

Wallingford, CT 06492

**Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE**  
Former Amphenol Facility  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the August 24 through September 21, 2012 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

#### **Groundwater Level Measurements**

On September 6, 2012, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 10.68 feet below top of casing (TOC) in MW-9 to 18.62 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a groundwater contour map based on the September 6, 2012 depth to water measurements has been included as **Figure 2**.

#### **Groundwater Treatment System**

From August 24 through September 21, 2012, approximately 868,484 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 172,435,185 gallons. The average influent groundwater recovery rate from August 24 through September 21, 2012 was approximately 21.5 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on September 6, 2012 to complete bi-weekly and monthly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on September 6, 2012.

Operation & Maintenance of the Implemented Corrective Measure  
Former Amphenol Facility  
Franklin, Indiana  
Page 2 of 2

---

IWM personnel mobilized to the site on September 21, 2012 to complete bi-weekly system operation and maintenance activities. Upon inspection, it was discovered that the pump in recovery well RW-4 was dysfunctional. IWM personnel replaced the pump in RW-4 and re-started groundwater recovery operations from RW-4. The groundwater recovery and treatment system was completely operational upon departure from the site on September 21, 2012.

**Schedule of Activities**

Monthly and biweekly system operation and maintenance activities and semi-annual groundwater sampling activities are scheduled for the month of October 2012. Site visits are scheduled for the weeks beginning October 1 and October 15, 2012. The information from these site inspections will be included in the October 2012 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting Group, LLC appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

**IWM CONSULTING GROUP, LLC**

Christopher D. Parks, LPG  
Project Manager

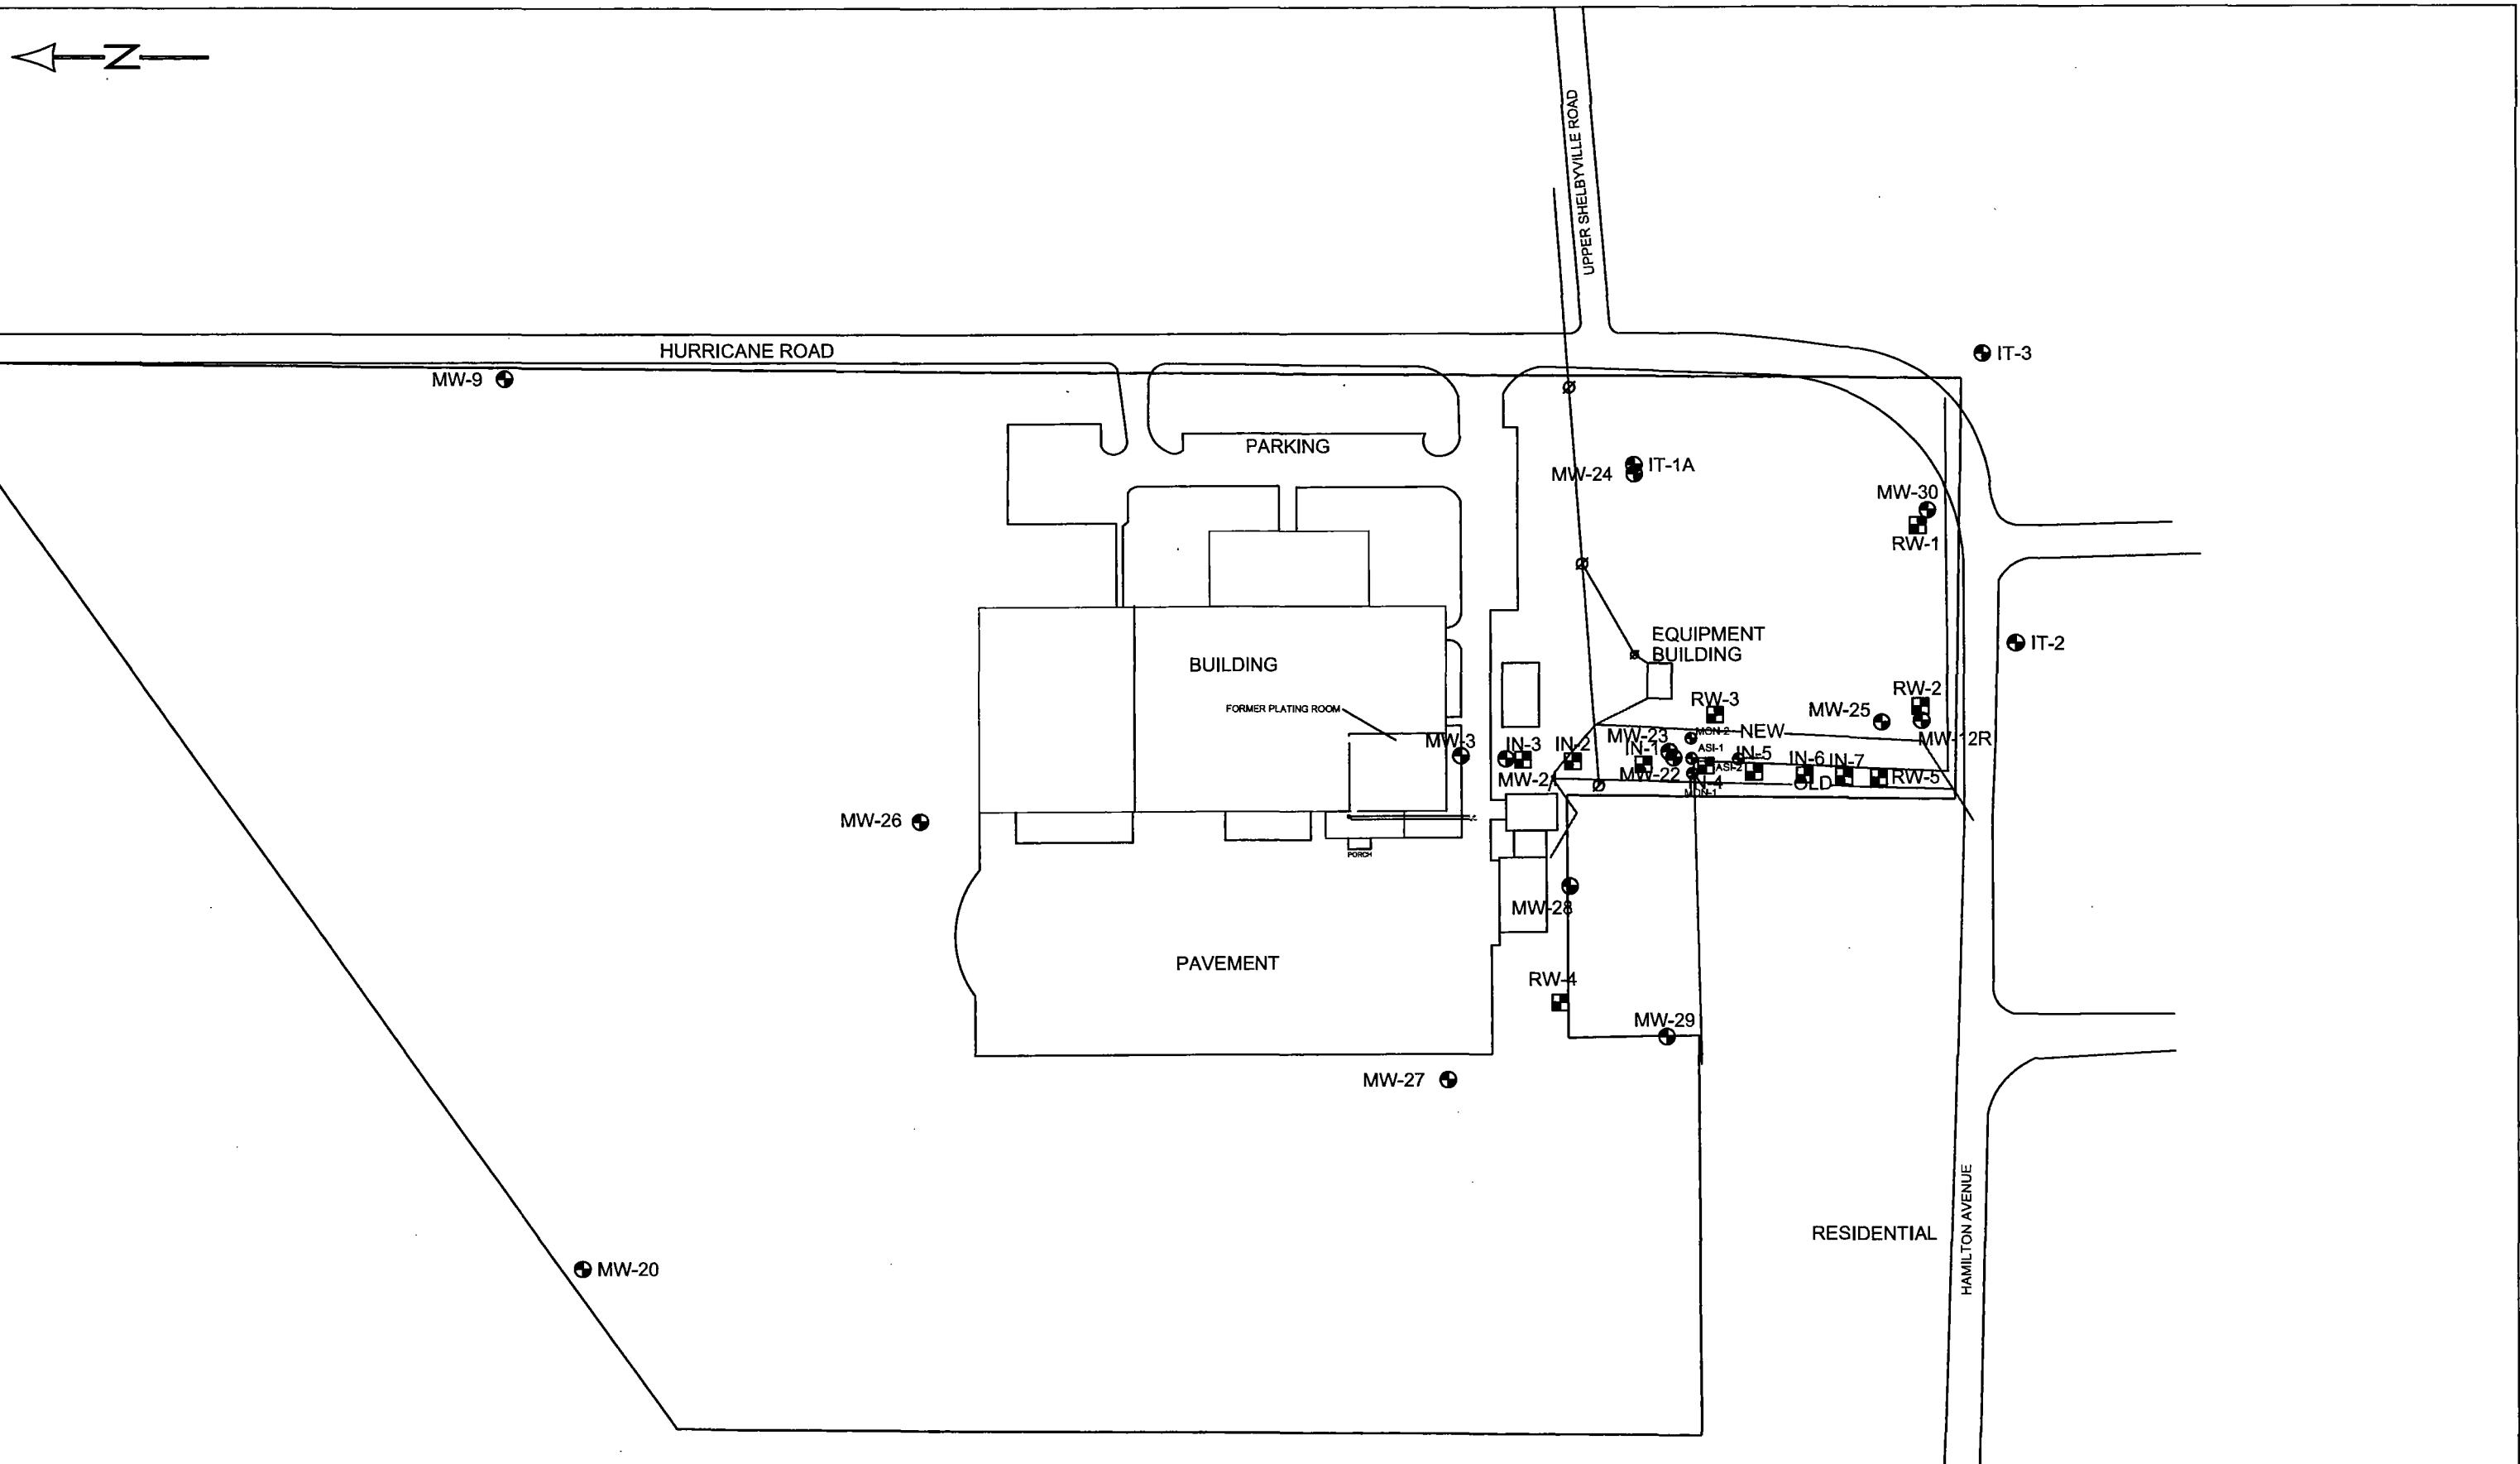

Bradley E. Gentry, LPG  
Senior Project Manager

**Notes:**

- Data prior to 4/12/96 was collected by EMCN.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

Wallingford, CT 06492

**Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE**  
Former Amphenol Facility  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the September 21 through October 19, 2012 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

#### **Groundwater Level Measurements**

On October 5, 2012, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 10.41 feet below top of casing (TOC) in MW-9 to 18.52 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a groundwater contour map based on the October 5, 2012 depth to water measurements has been included as **Figure 2**.

#### **Groundwater Treatment System**

From September 21 through October 19, 2012, approximately 1,086,033 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 173,521,218 gallons. The average influent groundwater recovery rate from September 21 through October 19, 2012 was approximately 26.9 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on October 5, 2012 to complete bi-weekly and monthly system operation and maintenance activities and semi-annual groundwater sampling activities. The groundwater

recovery and treatment system was completely operational upon arrival and departure from the site on October 5, 2012.

IWM personnel mobilized to the site on October 19, 2012 to complete bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon departure from the site on October 19, 2012.

#### **Semi-Annual Groundwater Sampling and Analysis**

On October 5, 2012, groundwater samples were obtained from monitoring wells IT-2, IT-3, MW-12R, MW-20, MW-22, MW-28, MW-29, and MW-30 for VOC analysis to evaluate current groundwater quality at the site. Groundwater samples were collected using dedicated, disposable, bottom-loading bailers to reduce the risk of cross-contamination. Three-well volumes were purged prior to sample collection. Samples were submitted to Pace Analytical Services, Inc. (Pace) for VOC analysis using US EPA SW 846 Method 8260B. Groundwater sampling logs are provided in **Attachment D**.

The highest VOC concentrations were detected in the groundwater samples obtained from monitoring well MW-22 (905.3 µg/L total VOCs) located 30 feet northwest of recovery well RW-3 and monitoring well MW-12R (890.6 µg/L total VOCs) located adjacent to recovery well RW-2. Therefore, the groundwater recovery and treatment system is effectively targeting the area of greatest VOC concentration. The concentrations of dissolved VOCs in monitoring wells MW-12 and MW-22 decreased substantially following installation of the groundwater recovery and treatment system in 1996. Overall, total VOC concentrations in these wells have been relatively stable during operation of the treatment system from 2000 to 2012.

Trichloroethene was detected in monitoring wells IT-2, IT-3, MW-12R, MW-22, MW-28, and MW-30. Cis-1,2-dichloroethene was detected in monitoring wells IT-2, MW-12R, and MW-22. 1,1,1-Trichloroethane was detected in monitoring wells IT-2, IT-3, MW-12R, MW-22, MW-28, and MW-30. Tetrachloroethene was detected in monitoring wells MW-12R, MW-20, MW-22, and MW-28.

Both monitoring wells IT-2 and IT-3 are located down-gradient from the site. Overall, total dissolved VOC concentrations in monitoring wells IT-2 and IT-3 have decreased over time during operation of the groundwater recovery and treatment system. Total dissolved VOC concentrations in monitoring wells MW-12R and MW-30 have decreased since the startup of the remedial system in 1996. Total dissolved VOC concentrations decreased substantially in monitoring wells MW-22 and MW-28 during the initial startup of the recovery system in 1996 and have been decreasing during operation of the groundwater recovery and treatment system from 2000 to 2012. Tetrachloroethene and trichloroethene concentrations were reduced significantly (47% and 37%, respectively) in monitoring well MW-22 as part of a three month enhanced bioremediation pilot study conducted in early 2007. During the implementation of the full scale enhanced bioremediation activities (July 2010 through March 2011), tetrachloroethene concentrations decreased 22% in monitoring well MW-22. Post full scale enhanced bioremediation activities, tetrachloroethene concentrations have decreased an additional 32% in monitoring well MW-22.

The dissolved VOC concentrations observed in monitoring well MW-12R initially (October 2010) increased immediately after implementation of the full scale enhanced bioremediation. The reason for the increased dissolved VOC concentrations is because several combination groundwater and microbe injection points (IN-4, IN-5, IN-6, and IN-7) were installed immediately hydraulically up-gradient from this well and

Operation & Maintenance of the Implemented Corrective Measure  
Former Amphenol Facility  
Franklin, Indiana  
Page 3 of 3

---

the injection points were able to "flush" the VOC impacted saturated soil, thus increasing the dissolved VOC concentrations while simultaneously decreasing the adsorbed VOC concentrations. Furthermore, the dissolved VOCs were drawn to and recovered by hydraulically down-gradient recovery wells RW-2 (adjacent to MW-12R) and RW-5 (approximately 45 feet west of MW-12R). Since monitoring well MW-12R is located between these two recovery wells, this explains why the dissolved VOC concentrations increased immediately after start-up of the full scale enhanced bioremediation activities. It should be noted that the dissolved VOCs displayed a decrease in concentrations during the April 2011 groundwater sampling event. During the October 2011 event, a substantial rebound of dissolved VOC concentrations was observed. Dissolved VOC concentrations in monitoring well MW-12R decreased approximately 72% from the October 2011 sampling event to the October 2012 sampling event.

No VOCs were detected in the groundwater samples obtained from monitoring well MW-29.

A trip blank and a field duplicate sample (MW-22) were obtained per IDEM Minimum Data Documentation Requirements dated February 13, 2003. The trip blank and the duplicate sample were analyzed for VOCs. The trip blank was below laboratory detection limits for all constituents and the duplicate analysis was relatively consistent with the sample which was duplicated. Groundwater sampling field logs are provided in **Attachment D**. Laboratory data sheets are provided in **Attachment E**. A summary of groundwater analytical results is included in **Table 1**.

**Schedule of Activities**

Quarterly, monthly, and biweekly system operation and maintenance activities activities are scheduled for the month of November 2012. Site visits are scheduled for the weeks beginning October 29, November 12, and November 26, 2012. The information from these site inspections will be included in the November 2012 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting Group, LLC appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

**IWM CONSULTING GROUP, LLC**

## Notes:

Results in micrograms per liter (ug/l).

ND - Not Detected - analyte not detected above laboratory method detection limit of 5.0 ug/L.

Samples were analyzed for VOCs using USEPA Method 8260 B.

NA - Not Available.

J - Estimated value.

\* Depth to water in MW-30 on May 30, 2003 is believed to be erroneous.

**Notes:**

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

RE: Project: Amphenol-AMP11-06  
Pace Project No.: 5070413

Dear Mr. Parks:

Enclosed are the analytical results for sample(s) received by the laboratory on October 05, 2012. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt

## QUALIFIERS

Project: Amphenol-AMP11-06  
Pace Project No.: 5070413

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

- L0      Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
- L3      Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
- M0      Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

**Laboratory Analytical Reports**  
**Groundwater Recovery and Treatment System Samples**

June 06, 2012

Mr. Chris Parks  
IWM Consulting  
7428 Rockville Road  
Indianapolis, IN 46214

RE: Project: Amphenol IN-AMP-11-05  
Pace Project No.: 5063292

Dear Mr. Parks:

Enclosed are the analytical results for sample(s) received by the laboratory on May 22, 2012. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt

## QUALIFIERS

Project: Amphenol IN-AMP-11-05

Pace Project No.: 5063292

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

## Container Codes

DG9H	40mL HCL amber vial	AG0U	100mL unpreserved amber glass	BP1N	1 liter HNO3 plastic	DG9P	40mL TSP amber vial
AG1U	1liter unpreserved amber glass	AG1H	1 liter HCL amber glass	BP1S	1 liter H2SO4 plastic	DG9S	40mL H2SO4 amber vial
WGFU	4oz clear soil jar	AG1S	1 liter H2SO4 amber glass	BP1U	1 liter unpreserved plastic	DG9T	40mL Na Thio amber vial
R	terra core kit	AG1T	1 liter Na Thiosulfate amber gl	BP1Z	1 liter NaOH, Zn, Ac	DG9U	40mL unpreserved amber vial
BP2N	500mL HNO3 plastic	AG2N	500mL HNO3 amber glass	BP2A	500mL NaOH, Asc Acid plastic		Wipe/Swab
BP2U	500mL unpreserved plastic	AG2S	500mL H2SO4 amber glass	BP2O	500mL NaOH plastic	JGFU	4oz unpreserved amber wide
BP2S	500mL H2SO4 plastic	AG2U	500mL unpreserved amber gla	BP2Z	500mL NaOH, Zn Ac	U	Summa Can
BP3N	250mL HNO3 plastic	AG3U	250mL unpreserved amber gla	AF	Air Filter	VG9H	40mL HCL clear vial
BP3U	250ml unpreserved plastic	BG1H	1 liter HCL clear glass	BP3C	250mL NaOH plastic	VG9T	40mL Na Thio. clear vial
BP3S	250mL H2SO4 plastic	BG1S	1 liter H2SO4 clear glass	BP3Z	250mL NaOH, Zn Ac plastic	VG9U	40mL unpreserved clear vial
AG3S	250mL H2SO4 glass amber	BG1T	1 liter Na Thiosulfate clear gla	C	Air Cassettes	VSG	Headspace septa vial & HCL
AG1S	1 liter H2SO4 amber glass	BG1U	1 liter unpreserved glass	DG9B	40mL Na Bisulfate amber vial	WGFX	4oz wide jar w/hexane wipe
BP1U	1 liter unpreserved plastic	BP1A	1 liter NaOH, Asc Acid plastic	DG9M	40mL MeOH clear vial	ZPLC	Ziploc Bag

RE: Project: Amphenol  
Pace Project No.: 5068122

Dear Mr. Parks:

Enclosed are the analytical results for sample(s) received by the laboratory on August 24, 2012. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read 'Kenneth Hunt'.

## QUALIFIERS

Project: Amphenol  
Pace Project No.: 5068122

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

RE: Project: Amphenol-AMP11-06  
Pace Project No.: 5070413

Dear Mr. Parks:

Enclosed are the analytical results for sample(s) received by the laboratory on October 05, 2012. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt

## QUALIFIERS

Project: Amphenol-AMP11-06  
Pace Project No.: 5070413

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

**Re: Implemented Corrective Measures – Groundwater Recovery and Treatment System  
Semi-Annual Post Closure Monitoring Report**  
Former Amphenol Facility #IND 044 587 848  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Thomas:

This Implemented Corrective Measures – Groundwater Recovery and Treatment System (ICM-GRTS) Report is submitted on behalf of the “Respondents”, Franklin Power Products, Incorporated and Amphenol Corporation. This report summarizes the “Work Efforts” completed during the first semi-annual period (October 18, 2011 through April 20, 2012) of the calendar year 2012. The “Work Efforts” were conducted pursuant to Section VIII of the Administrative Order on Consent for Corrective Measures Implementation (CMI) for the above referenced site and in accordance with the approved Post Closure Monitoring Work Plan submitted to the USEPA in March 2000.

The “Work Efforts” performed at the site included:

- Operations and Maintenance of the Groundwater Recovery and Treatment System
- Groundwater Elevation Monitoring
- Quarterly Sampling and Analysis of the Groundwater Recovery and Treatment System
- Semi-Annual Groundwater Sampling and Analysis

**Groundwater Recovery and Treatment System – Operations and Maintenance**

The Implemented Corrective Measure (ICM) at the site is a groundwater pump and treat system consisting of 5 recovery wells (RW-1 through RW-5). Recovery wells RW-1, RW-2, and RW-3 have 5 foot screened intervals at depths of approximately 15 to 20 ft BGS and 2 foot sumps. Recovery well RW-4 has a 10 foot screened interval at a depth of approximately 13 to 23 ft BGS and a 4-foot sump. An additional recovery well (RW-5) was installed in June 2010 and activated in July 2010 in conjunction with supplemental bioremediation activities being completed at the site. Recovery well RW-5 has a 10 foot screened interval at a depth of approximately 14 to 24 feet BGS and a 2-foot sump. Electric submersible pumps are used to pump groundwater from the recovery wells to an air stripper where volatile organic compounds (VOCs) are volatilized and exhausted to the atmosphere. Groundwater effluent from the air stripper is discharged to the City of Franklin municipal sanitary sewer system. In addition to VOC removal, the ICM is designed to lower the potentiometric groundwater surface to below the level of the existing storm sewer invert.

To ensure proper performance of the groundwater recovery and treatment system, IWM Consulting Group, LLC (IWM) personnel conducted routine operation and maintenance (O&M) inspections. Bi-weekly O&M duties include measurement of influent flow rates, measurement of groundwater elevations of the recovery wells, routine inspections and necessary repairs of influent and effluent lines, and air stripper maintenance. On a monthly basis, depth to groundwater is recorded in monitoring wells IT-2, IT-3, MW-3, MW-9, MW-12R, MW-20, MW-21, MW-22, MW-24, MW-26, MW-27, MW-28, MW-29, MW-30, and recovery wells RW-1 through RW-5. The air stripper trays and effluent discharge line are inspected and cleaned as necessary during monthly O&M activities. Also, influent sediment filters are replaced monthly. Quarterly O&M activities include complete disassembly and cleaning of the air stripper trays and sump. The sequestering agent system is also maintained on a quarterly basis. The air stripper blower lubrication and integrity is inspected on a quarterly basis. All recovery well pumps are also removed and cleaned on a quarterly basis. Monthly O&M reports are attached in **Appendix A**.

During this reporting period (October 18, 2011 through April 20, 2012), approximately 7,823,670 gallons of groundwater were recovered, treated, and discharged. The combined average influent flow rate for the period was 29.4 gpm. To date, approximately 166,252,928 gallons have been recovered. Groundwater recovery rates to date are provided in **Table 1**.

Overall the groundwater recovery and treatment system was very reliable and was operational during the majority of this reporting period. However, the following operational issues were encountered:

IWM personnel mobilized to the site on December 1, 2011 to complete monthly and bi-weekly system operation and maintenance activities. Upon arrival to the site, the pump for RW-1 appeared to be operating, but groundwater recovery was not being registered. The totalizer was permanently replaced but groundwater was still not being recovered by the pump in recovery well RW-1. Additional personnel would be required for removing the groundwater recovery pump in RW-1. The groundwater recovery and treatment system was completely operational upon departure from the site on December 1, 2011, with the exception of recovery well RW-1.

IWM personnel mobilized to the site on December 13, 2011 to evaluate the pump on recovery well RW-1. The pump and Warrick control for recovery well RW-1 were replaced. The pump continued to not operate properly. The starter for recovery well RW-1 was evaluated and found to be faulty. The starter was ordered and would have to be installed at a later date. The groundwater recovery and treatment system was completely operational upon departure from the site on December 13, 2011, with the exception of recovery well RW-1.

IWM personnel mobilized to the site on December 21, 2011 to replace the starter on recovery well RW-1. Upon replacement of the starter, recovery well RW-1 began to recover groundwater and operate correctly. The groundwater recovery and treatment system was completely operational upon departure from the site on December 21, 2011.

IWM personnel mobilized to the site on January 16, 2012 to respond to a Chatterbox alarm notification. The groundwater recovery and treatment system was not operational upon arrival. It was discovered that a power interruption had shut down the system. The system was restarted and checked for operational issues. The groundwater recovery and treatment system was completely operational upon departure from the site on January 16, 2012.

### **Groundwater Level Measurements**

On a monthly basis, IWM personnel gauge select monitoring wells (IT-2, IT-3, MW-3, MW-9, MW-12R, MW-20, MW-21, MW-22, MW-23, MW-24, MW-26, MW-27, MW-28, MW-29, and MW-30) at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. For this semi-annual reporting period, depth to water in the monitoring wells ranged from 7.71 feet below top of casing (TOC) in MW-9 to 18.11 feet below TOC in MW-22. During this reporting period, neither LNAPL nor DNAPL were detected within the monitoring and recovery well network at the site. Additionally, the water table has raised approximately 1.14 feet from October 2011 to April 2012. The groundwater elevation data indicates that the groundwater recovery and treatment system maintains hydraulic control of the dissolved VOC plume. **Figure 1** is a site plan illustrating pertinent site features and well locations. A groundwater elevation contour map based on the most recent gauging event (April 6, 2012) is provided as **Figure 2**. Historic groundwater elevation data and groundwater contour maps for this reporting period are provided in each monthly O&M report included in **Appendix A**. Groundwater elevations during this semi-annual reporting period are provided in **Table 2**.

### **Quarterly Treatment System Sampling and Analysis**

On November 18, 2011, influent samples from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 and a combined effluent sample were obtained to evaluate the groundwater treatment system. Each of the influent sample taps was allowed to run for at least 10 seconds. Prior to sampling, water flow from the tap was reduced to minimize turbulence and agitation. All samples were submitted to Pace Analytical Services, Inc. (Pace), located in Indianapolis, Indiana for VOC analysis by SW-846 Method 8260B.

Laboratory analytical results from the November 18, 2011 quarterly system sampling activities indicated the presence of trichloroethene and 1,1,1-trichloroethane in groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. Cis-1,2-dichloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, and RW-5. Tetrachloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, RW-4, and RW-5. 1,1-Dichloroethane was detected in the groundwater samples obtained from recovery wells RW-2 and RW-3. No constituents of concern were detected in the remedial system's effluent water sample.

On February 24, 2012, influent samples from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 and a combined effluent sample were obtained to evaluate the groundwater treatment system. Each of the influent sample taps was allowed to run for at least 10 seconds. Prior to sampling, water flow from the tap was reduced to minimize turbulence and agitation. All samples were submitted to Pace, located in Indianapolis, Indiana for VOC analysis by SW-846 Method 8260B.

Laboratory analytical results from the February 24, 2012 quarterly system sampling activities indicated the presence of trichloroethene in groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. 1,1,1-Trichloroethane was detected in the groundwater sample obtained from recovery well RW-2. Cis-1,2-dichloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, and RW-5. Tetrachloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, RW-4, and RW-5. 1,1-Dichloroethane was detected in the groundwater sample obtained from recovery well RW-2. No constituents of concern were detected in the remedial system's effluent water sample.

The analytical reports for the quarterly system sampling events are included in **Appendix B**. A summary of quarterly system sampling results is included in **Table 3**.

#### **Semi-Annual Groundwater Sampling and Analysis**

On April 6, 2012, groundwater samples were obtained from monitoring wells IT-2, IT-3, MW-12R, MW-20, MW-22, MW-28, MW-29, and MW-30 for VOC analysis to evaluate current groundwater quality at the site. Groundwater samples were collected using dedicated, disposable, bottom-loading bailers to reduce the risk of cross-contamination. Three-well volumes were purged prior to sample collection. Samples were submitted to Pace for VOC analysis using US EPA SW 846 Method 8260B.

The highest VOC concentrations were detected in the groundwater samples obtained from monitoring well MW-22 (847.4 µg/L total VOCs) located 30 feet northwest of recovery well RW-3 and monitoring well MW-12R (1,255.7 µg/L total VOCs) located adjacent to recovery well RW-2. Therefore, the groundwater recovery and treatment system is effectively targeting the area of greatest VOC concentration. The concentrations of dissolved VOCs in monitoring wells MW-12 and MW-22 decreased substantially following installation of the groundwater recovery and treatment system in 1996. Overall, total VOC concentrations in these wells have been relatively stable during operation of the treatment system from 2000 to 2012.

No VOCs were detected in the groundwater samples obtained from monitoring wells MW-20 and MW-29. Trichloroethene was detected in monitoring wells IT-2, IT-3, MW-12R, MW-22, and MW-28. Cis-1,2-dichloroethene was detected in monitoring wells IT-2, MW-12R, and MW-22. 1,1,1-Trichloroethane was detected in monitoring wells MW-12R, MW-22, MW-28, and MW-30. Tetrachloroethene was detected in monitoring wells MW-12R, MW-22, and MW-28.

Both monitoring wells IT-2 and IT-3 are located down-gradient from the site. Overall, total dissolved VOC concentrations in monitoring wells IT-2 and IT-3 have decreased over time during operation of the groundwater recovery and treatment system. Total dissolved VOC concentrations in monitoring wells MW-12R and MW-30 have decreased since the startup of the remedial system in 1996. Total dissolved VOC concentrations decreased substantially in monitoring wells MW-22 and MW-28 during the initial startup of the recovery system in 1996 and have been decreasing during operation of the groundwater recovery and treatment system from 2000 to 2012. Tetrachloroethene and trichloroethene concentrations were reduced significantly (47% and 37%, respectively) in monitoring well MW-22 as part of a three month enhanced bioremediation pilot study conducted in early 2007. During the implementation of the full scale enhanced bioremediation activities (July 2010 through March 2011), tetrachloroethene concentrations decreased 22% in monitoring well MW-22. Post full scale enhanced bioremediation activities, tetrachloroethene concentrations have decreased an additional 39% in monitoring well MW-22.

The dissolved VOC concentrations observed in monitoring well MW-12R initially (October 2010) increased immediately after implementation of the full scale enhanced bioremediation. The reason for the increased dissolved VOC concentrations is because several combination groundwater and microbe injection points (IN-4, IN-5, IN-6, and IN-7) were installed immediately hydraulically up-gradient from this well and the injection points were able to “flush” the VOC impacted saturated soil, thus increasing the dissolved VOC concentrations while simultaneously decreasing the adsorbed VOC concentrations. Furthermore, the dissolved VOCs were drawn to and recovered by hydraulically down-gradient recovery wells RW-2 (adjacent to MW-12R) and RW-5 (approximately 45 feet west of MW-12R). Since monitoring well MW-12R is located between these two recovery wells, this explains why the dissolved VOC concentrations increased immediately after start-up of the full scale enhanced bioremediation activities. It should be noted that the dissolved VOCs displayed a decrease in concentrations during the April 2011 groundwater sampling event.

During the October 2011 event, a substantial rebound of dissolved VOC concentrations was observed after the full-scale bioremediation activities were ceased. However, the dissolved VOC concentrations in monitoring well MW-12R decreased approximately 58% between the October 2011 sampling event and the April 2012 sampling event. At this point, the dissolved VOC concentrations in MW-12R are not exhibiting any consistent trend and further sampling is required.

A trip blank and a field duplicate sample (MW-22) were obtained per IDEM Minimum Data Documentation Requirements dated February 13, 2003. The trip blank and the duplicate sample were analyzed for VOCs. The trip blank was below laboratory detection limits for all constituents and the duplicate analysis was relatively consistent with the sample which was duplicated. Groundwater sampling field logs are provided in **Appendix C**. Laboratory data sheets are provided in **Appendix D**. A summary of groundwater analytical results is included in **Table 4**.

### **Conclusions**

Based on the data collected during this semi-annual post closure monitoring period, the following conclusions can be asserted:

1. The groundwater recovery and treatment system maintains hydraulic control of the dissolved VOC plume.
2. The cone of influence developed by the on-site recovery wells extends beyond the downgradient site property boundary.
3. The average combined influent rate for the groundwater recovery system is approximately 29.4 gpm.
4. The highest dissolved PCE concentrations were detected near the suspected release area where the sanitary sewer crosses the existing storm sewer.
5. The highest VOC concentrations were detected in the groundwater samples obtained from monitoring wells MW-22 and MW-12R, located adjacent to recovery wells RW-3 and RW-2, respectively. Therefore, the groundwater recovery and treatment system is effectively targeting the area of greatest VOC concentrations.
6. Following activation of the groundwater recovery and treatment system, total dissolved VOC concentrations decreased substantially. Since initial startup of the remedial system, total VOC concentrations have displayed decreasing trends in monitoring wells IT-2, IT-3, MW-12/12R, MW-22, MW-28, and MW-30.
7. A full-scale implementation of enhanced bio-remediation activities were initiated in July 2010. As part of enhanced bio-remediation corrective actions, one recovery well (RW-5) and five additional injection wells (IN-3 through IN-7) were installed at the site. The recovery well was activated in July 2010. The injection of oxygenated water with intermittent microbe injection activities were also initiated in late July 2010. Immediately following the completion of the full scale enhanced bioremediation activities in March 2011, tetrachloroethene concentrations were reduced 16% (MW-21), 68% (MW-22), 42% (ASI-1), 73% (ASI-2), 19% (MON-1), 26% (MON-2), 69% (RW-2), 64% (RW-3), 40% (RW-5), 78% (IN-1), 89% (IN-2), 76% (IN-3), 75% (IN-4), 25% (IN-5), and 76% (IN-7). The injection activities were ceased in March 2011.

3/23/2012	18,937,777	34,222,618	49,324,691	54,989,061	7,449,391	164,944,765
4/6/2012	18,985,172	34,316,006	49,452,912	55,194,431	7,629,191	165,598,939
4/20/2012	19,034,085	34,411,741	49,579,662	55,399,648	7,806,565	166,252,928

**Notes:**

- Data prior to 4/12/96 was collected by EMCN.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

Notes:

Results in micrograms per liter (ug/l).

(1) ND - Not Detected - analyte not detected above laboratory method detection limit.

(2) NS - Not Sampled, RW-1 not in operation during April 1996 and November 1997 sampling events.

E - Trichloroethane value for RW-1 during the November 13, 1998 sampling event is an estimated value only.

Notes:

Results in micrograms per liter (ug/l).

- Naphthalene and MTBE were detected at 18 and 17 ug/L, respectively; however, these detections are most likely due to laboratory artifacts or handling issues.

-- Methylene chloride was detected at 5.9 ug/L, however, this detection was most likely due to a laboratory artifact.

Notes:

Results in micrograms per liter (ug/l).

ND - Not Detected - analyte not detected above laboratory method detection limit of 5.0 ug/L.

Samples were analyzed for VOCs using USEPA Method 8260 B.

NA - Not Available.

J - Estimated value.

## Notes:

Results in micrograms per liter (ug/L).

ND - Not Detected - analyte not detected above laboratory method detection limit of 5.0 ug/L.

Samples were analyzed for VOCs using USEPA Method 8260 B.

NA - Not Available.

J - Estimated value.

\* Depth to water in MW-30 on May 30, 2003 is believed to be erroneous.

## **APPENDIX A**

### **Monthly O&M Reports**

7428 Rockville Road, Indianapolis, IN 46214

December 6, 2011

Mr. Sam Waldo  
Director, Environmental Affairs  
AMPHENOL CORPORATION  
World Headquarters  
358 Hall Avenue  
Wallingford, CT 06492

**Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE**  
Former Amphenol Facility  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the October 18 through November 18, 2011 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

#### **Groundwater Level Measurements**

On November 4, 2011, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 9.75 feet below top of casing (TOC) in MW-9 to 18.11 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a groundwater contour map based on the November 4, 2011 depth to water measurements has been included as **Figure 2**.

#### **Groundwater Treatment System**

From October 18 through November 18, 2011, approximately 1,079,050 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 159,508,308 gallons. The average influent groundwater recovery rate from October 18 through November 18, 2011 was approximately 24.2 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on November 4, 2011 to complete quarterly, monthly, and bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on November 4, 2011.

IWM personnel mobilized to the site on November 18, 2011 to complete bi-weekly system operation and maintenance activities and quarterly system sampling activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on November 18, 2011.

#### Quarterly Treatment System Sampling

On November 18, 2011, influent samples from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 and a combined effluent sample were obtained to evaluate the groundwater treatment system. Each of the influent sample taps was allowed to run for at least 10 seconds. Prior to sampling, water flow from the tap was reduced to minimize turbulence and agitation. All samples were submitted to Pace Analytical Services, Inc. (Pace), located in Indianapolis, Indiana for volatile organic compound (VOC) analysis by SW-846 Method 8260B.

Laboratory analytical results from the November 18, 2011 quarterly system sampling activities indicated the presence of trichloroethene and 1,1,1-trichloroethane in groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. Cis-1,2-dichloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, and RW-5. Tetrachloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, RW-4, and RW-5. 1,1-Dichloroethane was detected in the groundwater samples obtained from recovery wells RW-2 and RW-3. No constituents of concern were detected in the remedial system's effluent water sample.

Historic quarterly system sampling analytical results are summarized in **Table 1**. Laboratory data sheets are provided in **Attachment D**.

#### Schedule of Activities

Bi-weekly and monthly system operation and maintenance activities are scheduled for the month of December 2011. Site visits are scheduled for the weeks beginning November 28, December 12, and December 26, 2011. The information from these site inspections will be included in the December 2011 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting Group, LLC appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

**IWM CONSULTING GROUP, LLC**

Christopher D. Parks, LPG  
Project Manager

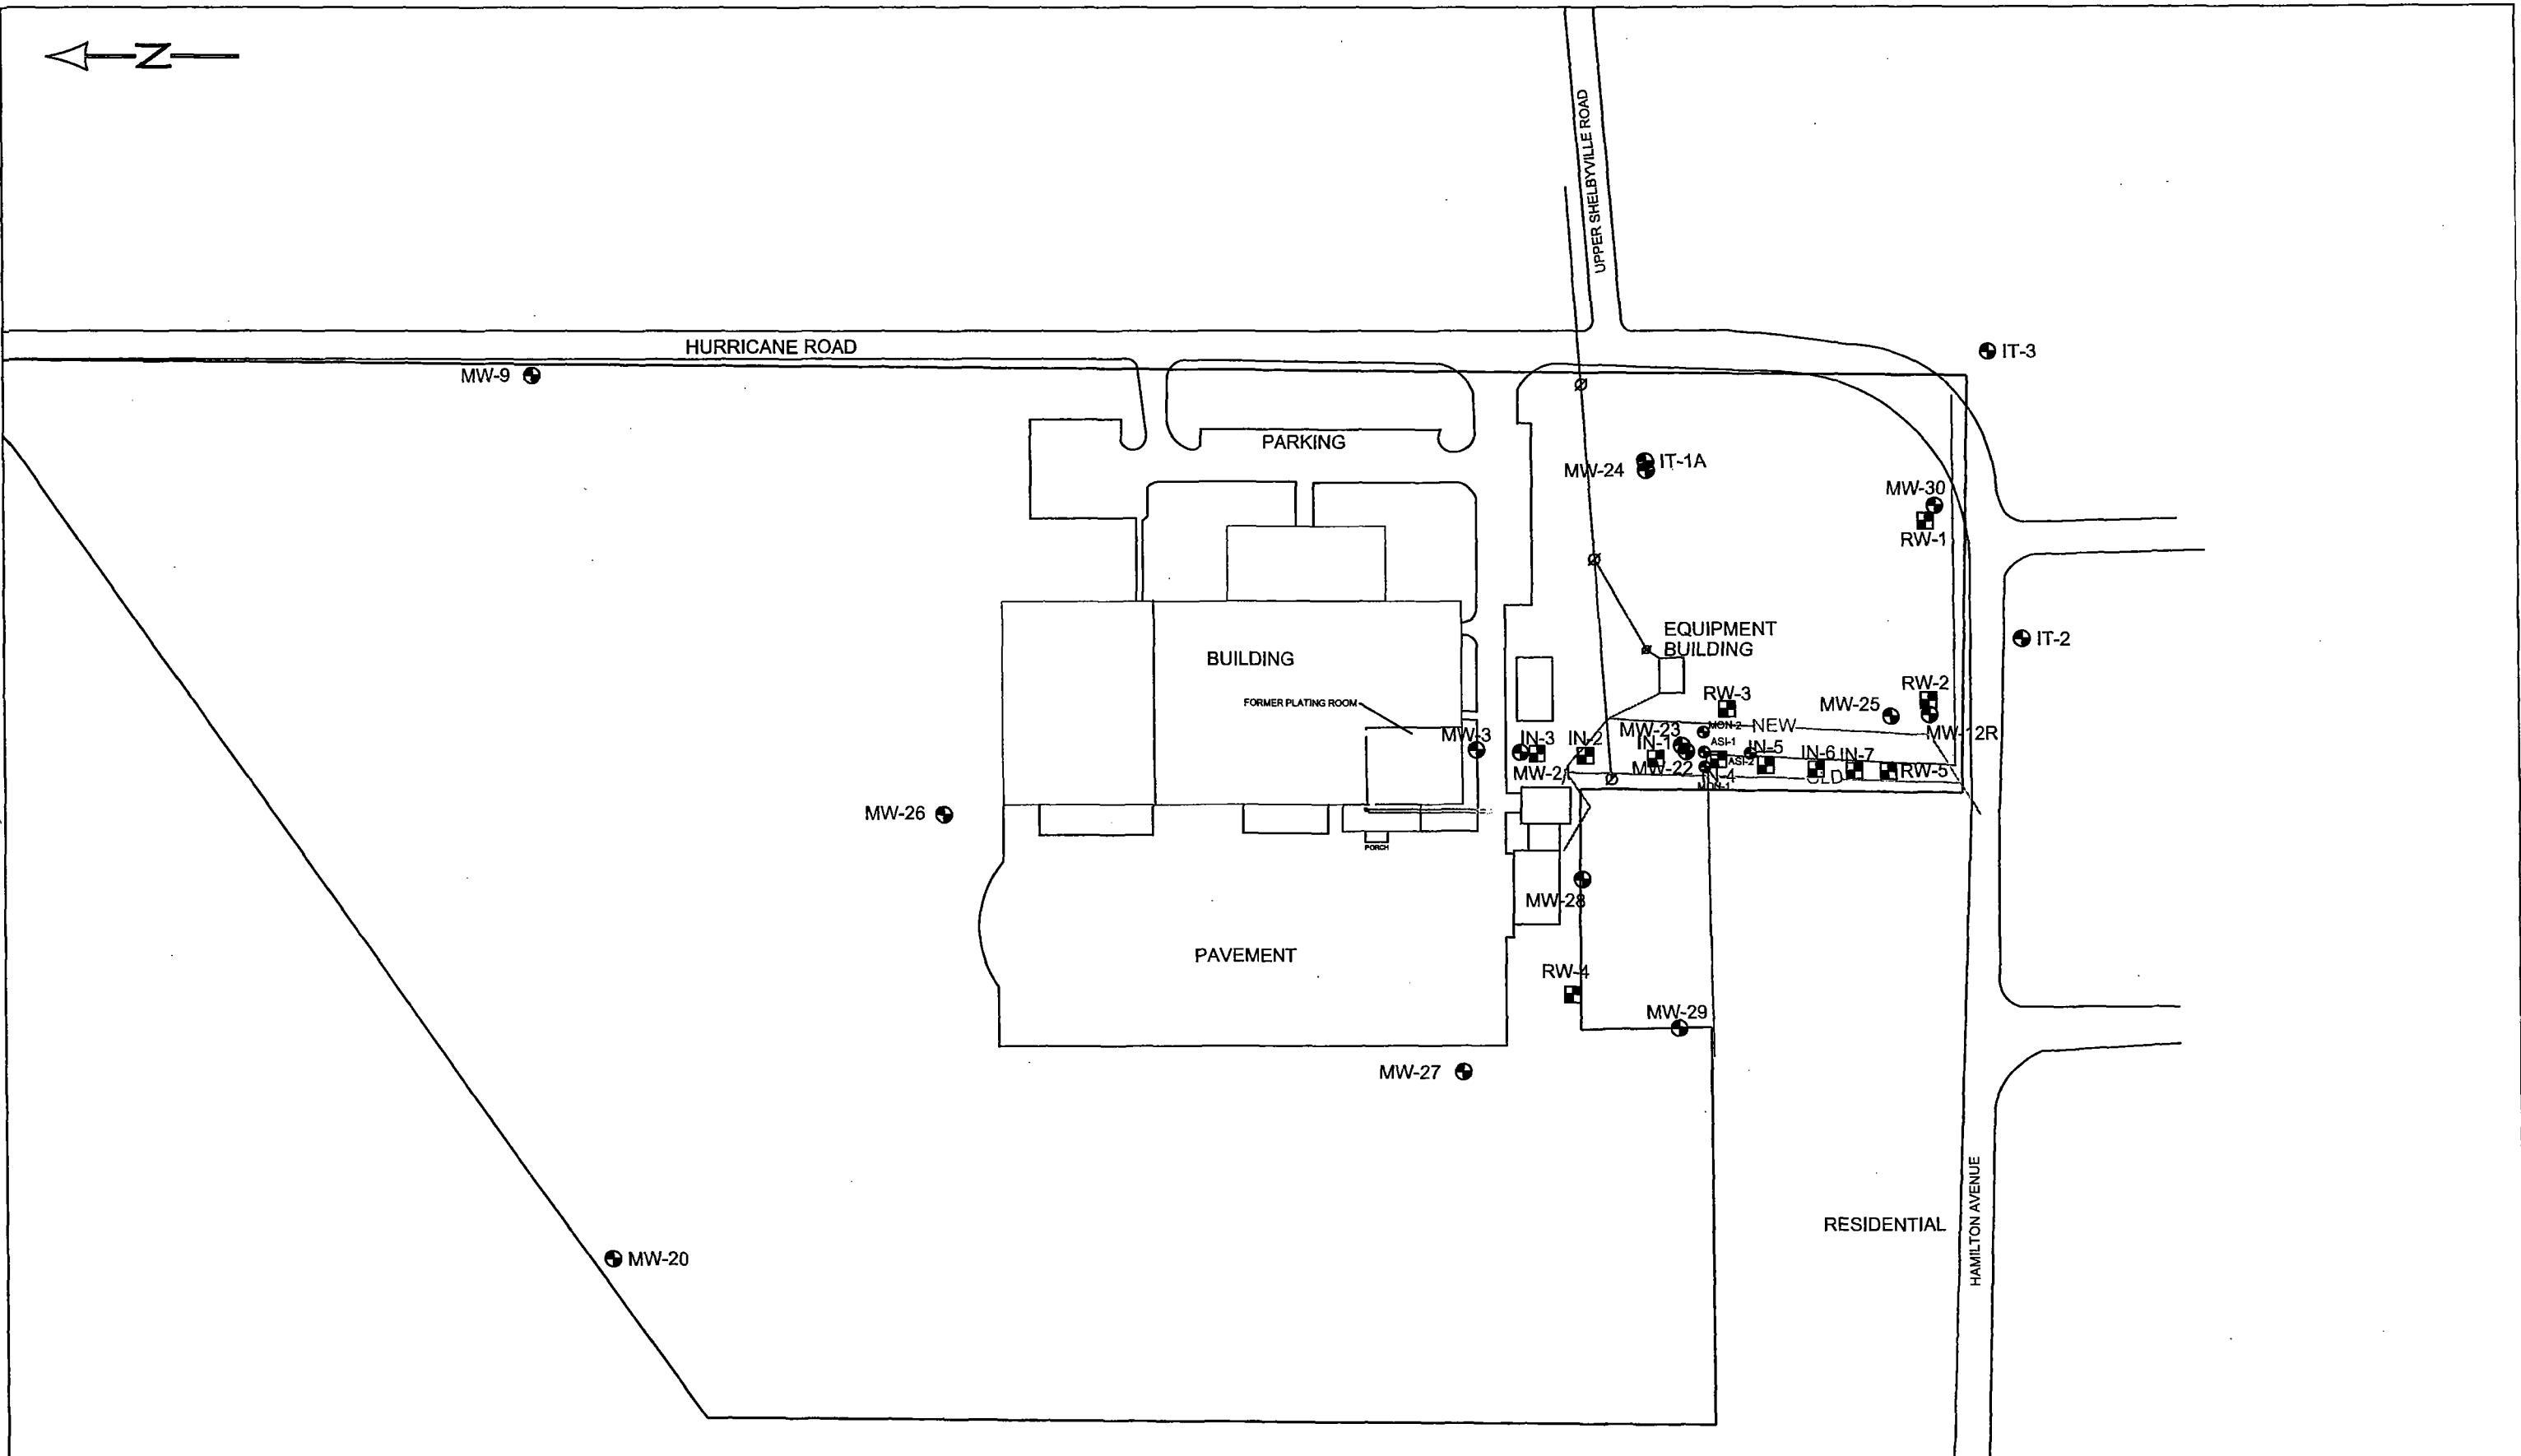

Bradley E. Gentry, LPG  
Senior Project Manager

Notes:

Results in micrograms per liter (ug/l).

(1) ND - Not Detected - analyte not detected above laboratory method detection limit.

(2) NS - Not Sampled, RW-1 not in operation during April 1998 and November 1997 sampling events.

E - Trichloroethene value for RW-1 during the November 13, 1998 sampling event is an estimated value only.

Notes:

Results in micrograms per liter (ug/l).

- Naphthalene and MTBE were detected at 18 and 17 ug/L, respectively; however, these detections are most likely due to laboratory artifacts or handling issues.

-- Methylene chloride was detected at 5.9 ug/L, however, this detection was most likely due to a laboratory artifact.

**Notes:**

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

**System Sampling Laboratory Analytical Report**

December 05, 2011

Mr. Chris Parks  
IWM Consulting  
7428 Rockville Road  
Indianapolis, IN 46214

RE: Project: Amphenol 11-05  
Pace Project No.: 5054970

Dear Mr. Parks:

Enclosed are the analytical results for sample(s) received by the laboratory on November 18, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt

## QUALIFIERS

Project: Amphenol 11-05  
Pace Project No.: 5054970

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

### ANALYTE QUALIFIERS

- 1d      Several compounds are outside of acceptance limits for RPD value. Refer to batch QC for system control. grm 11-29-11  
L3      Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

**Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED  
CORRECTIVE MEASURE**

Former Amphenol Facility  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the November 18 through December 28, 2011 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

**Groundwater Level Measurements**

On December 1, 2011, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 8.57 feet below top of casing (TOC) in MW-9 to 17.70 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a groundwater contour map based on the December 1, 2011 depth to water measurements has been included as **Figure 2**.

**Groundwater Treatment System**

From November 18 through December 28, 2011, approximately 1,610,678 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 161,118,986 gallons. The average influent groundwater recovery rate from November 18 through December 28, 2011 was approximately 28.0 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on December 1, 2011 to complete monthly and bi-weekly system operation and maintenance activities. Upon arrival to the site, the pump for RW-1 appeared to be operating, but groundwater recovery was not being registered. The totalizer was permanently replaced but

groundwater was still not being recovered by the pump in recovery well RW-1. Additional personnel would be required for removing the groundwater recovery pump in RW-1. The groundwater recovery and treatment system was completely operational upon departure, with the exception of recovery well RW-1, from the site on December 1, 2011.

IWM personnel mobilized to the site on December 13, 2011 to evaluate the pump on recovery well RW-1. The pump and Warrick control for recovery well RW-1 were replaced. The pump continued to not operate properly. The starter for recovery well RW-1 was evaluated and found to be faulty. The starter was ordered and would have to be installed at a later date. The groundwater recovery and treatment system was completely operational, with the exception of recovery well RW-1, upon departure from the site on December 13, 2011.

IWM personnel mobilized to the site on December 16, 2011 to complete bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational, with the exception of recovery well RW-1, upon departure from the site on December 16, 2011.

IWM personnel mobilized to the site on December 21, 2011 to replace the starter on recovery well RW-1. Upon replacement of the starter, recovery well RW-1 began to recover groundwater and operate correctly. The groundwater recovery and treatment system was completely operational upon departure from the site on December 21, 2011.

IWM personnel mobilized to the site on December 28, 2011 to complete bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on December 28, 2011.

#### **Schedule of Activities**

Bi-weekly and monthly system operation and maintenance activities are scheduled for the month of January 2012. Site visits are scheduled for the weeks beginning January 9 and January 23, 2012. The information from these site inspections will be included in the January 2012 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting Group, LLC appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

**IWM CONSULTING GROUP, LLC**

Christopher D. Parks, LPG  
Project Manager

Bradley E. Gentry, LPG  
Senior Project Manager

**Notes:**

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

**Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED**

**CORRECTIVE MEASURE**

Former Amphenol Facility  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the December 28, 2011 through January 27, 2012 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

**Groundwater Level Measurements**

On January 13, 2012, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 8.18 feet below top of casing (TOC) in MW-9 to 17.24 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a groundwater contour map based on the January 13, 2012 depth to water measurements has been included as **Figure 2**.

**Groundwater Treatment System**

From December 28, 2011 through January 27, 2012, approximately 1,317,283 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 162,436,269 gallons. The average influent groundwater recovery rate from December 28, 2011 through January 27, 2012 was approximately 30.5 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on January 13, 2012 to complete monthly and bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon departure from the site on January 13, 2012.

Operation & Maintenance of the Implemented Corrective Measure  
Former Amphenol Facility  
Franklin, Indiana  
Page 2 of 2

---

IWM personnel mobilized to the site on January 16, 2012 to respond to a Chatterbox alarm notification. The groundwater recovery and treatment system was not operational upon arrival. It was discovered that a power interruption had shut down the system. The system was restarted and checked for operational issues. The groundwater recovery and treatment system was completely operational upon departure from the site on January 16, 2012.

IWM personnel mobilized to the site on January 27, 2012 to complete bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on January 27, 2012.

**Schedule of Activities**

Bi-weekly, monthly, and quarterly system operation and maintenance activities are scheduled for the month of February 2012. Site visits are scheduled for the weeks beginning February 6 and February 20, 2012. The information from these site inspections will be included in the February 2012 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting Group, LLC appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

**IWM CONSULTING GROUP, LLC**

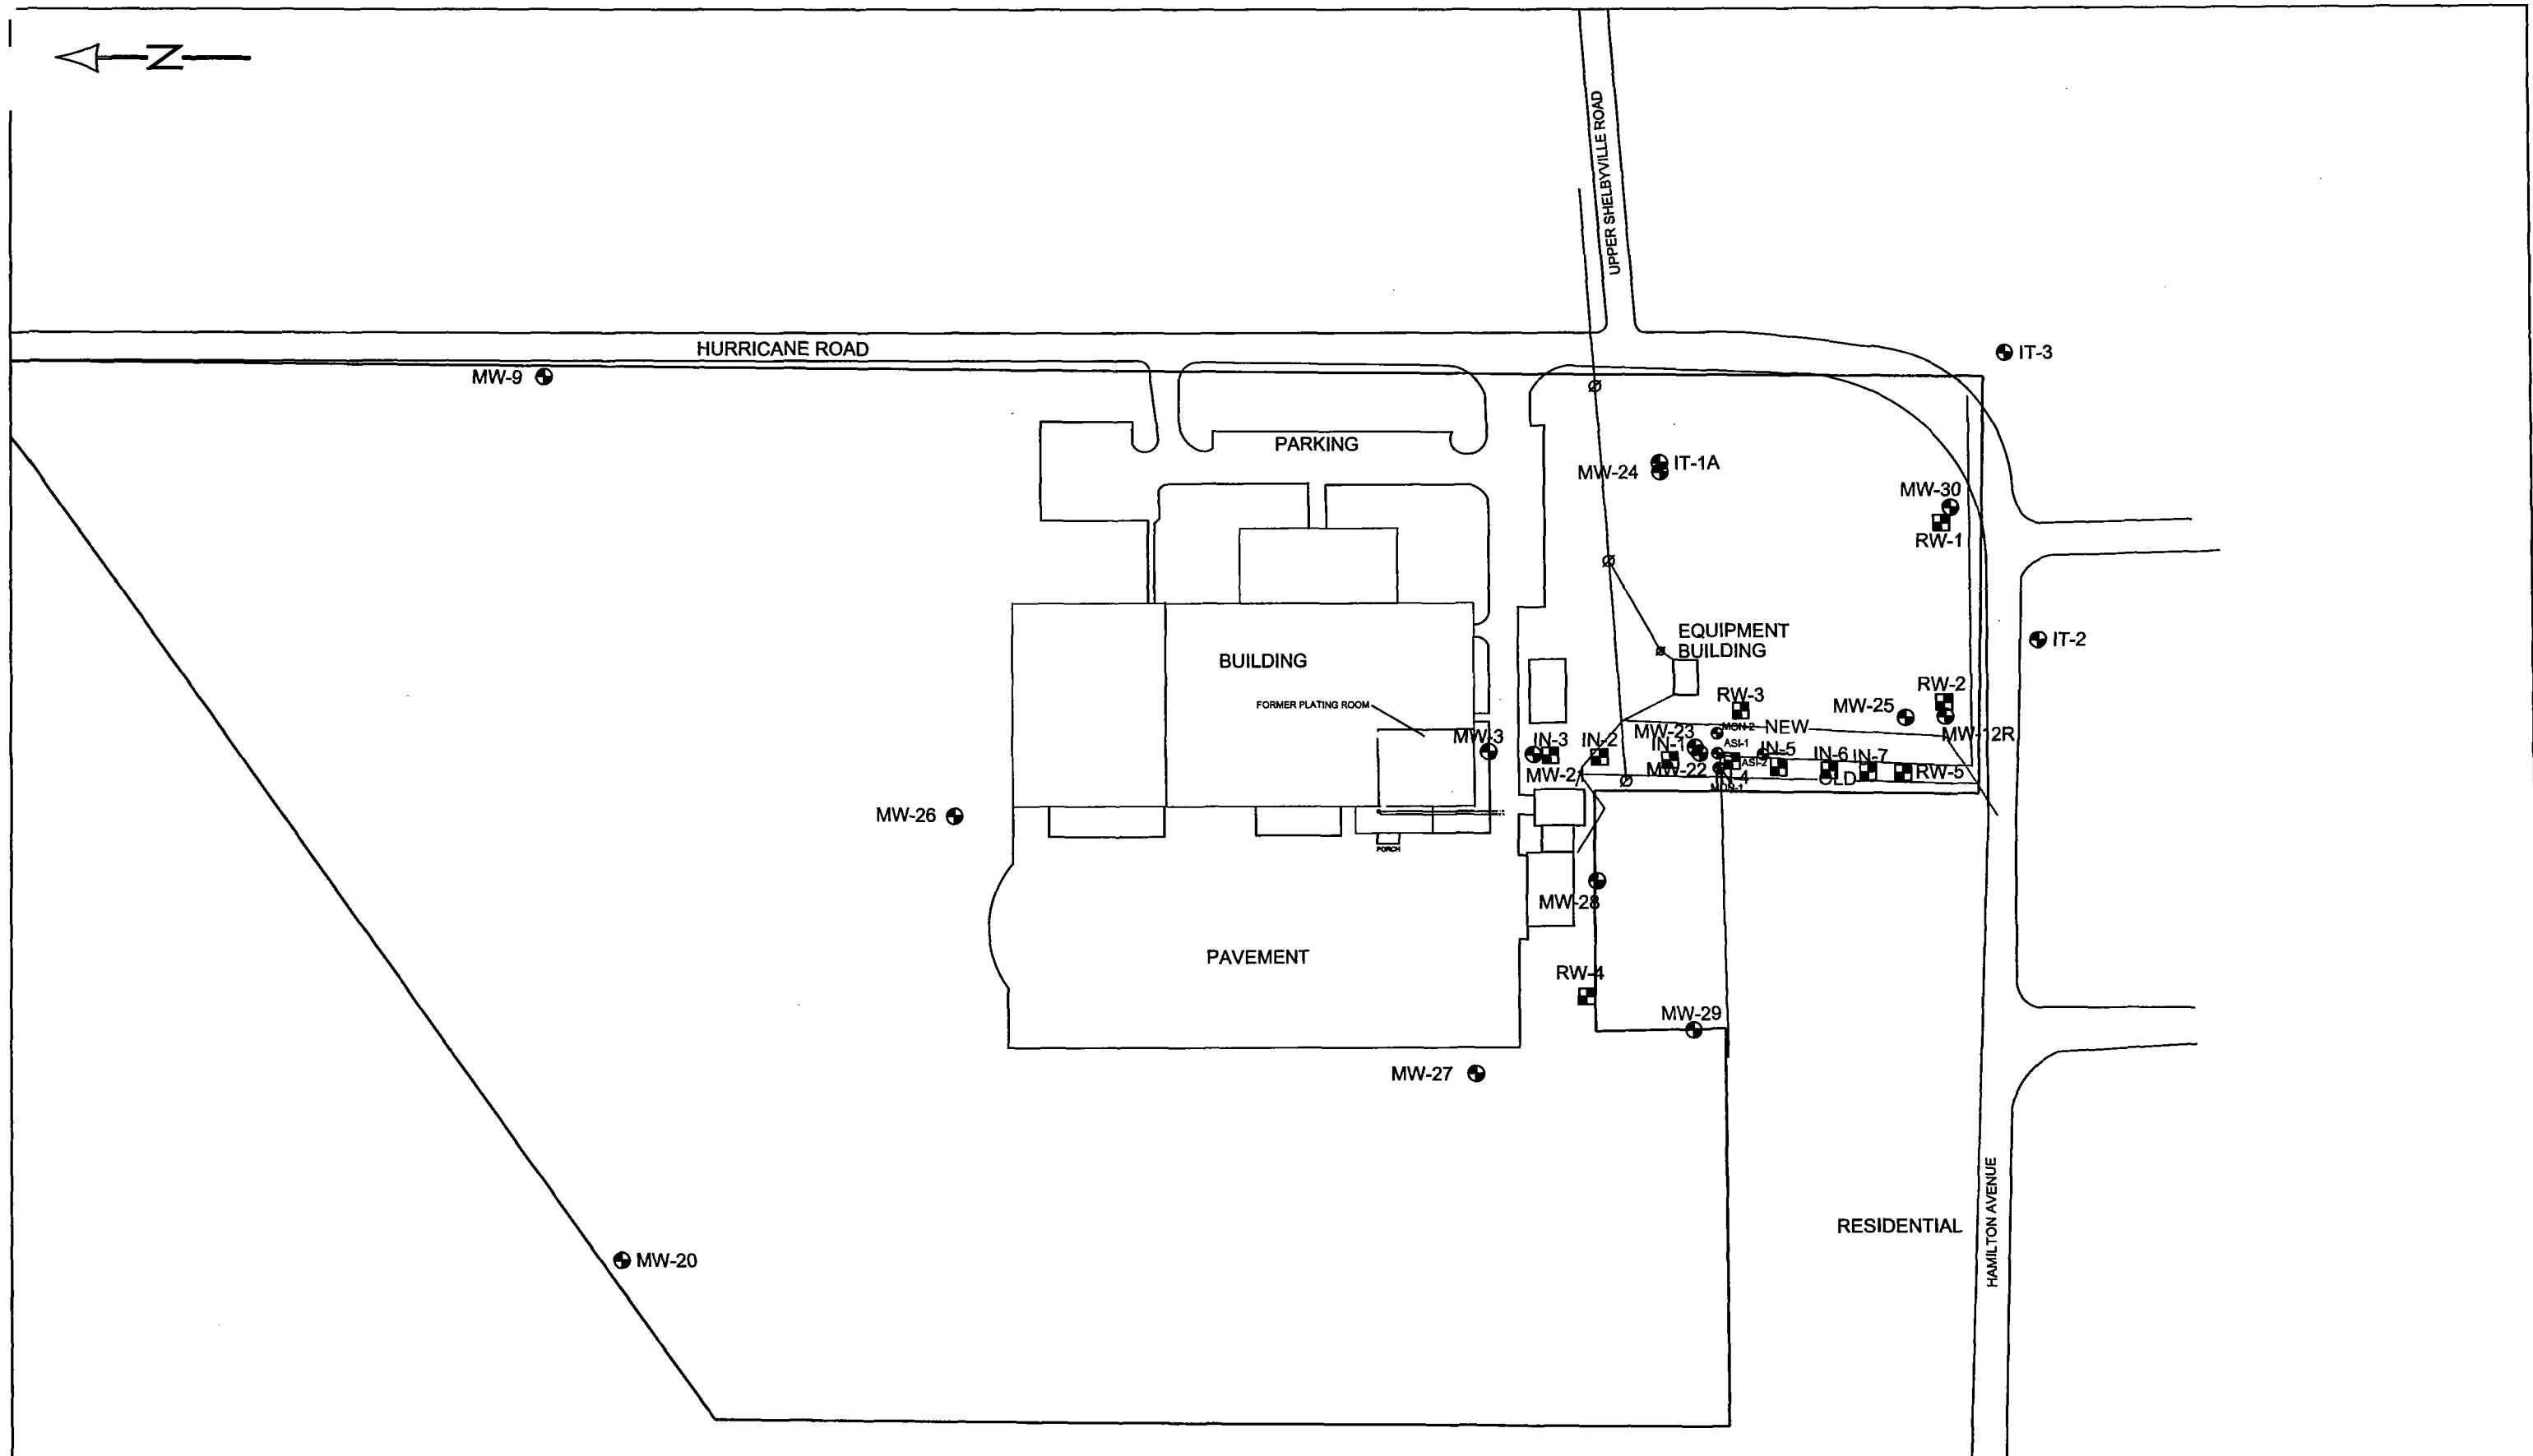

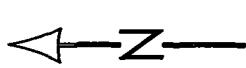

Christopher D. Parks, LPG  
Project Manager

Bradley E. Gentry, LPG

**Notes:**

- Data prior to 4/12/96 was collected by EMCN.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

**Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE**

Former Amphenol Facility  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the January 27 through February 24, 2012 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

**Groundwater Level Measurements**

On February 10, 2012, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 7.76 feet below top of casing (TOC) in MW-9 to 17.05 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a groundwater contour map based on the February 10, 2012 depth to water measurements has been included as **Figure 2**.

**Groundwater Treatment System**

From January 27 through February 24, 2012, approximately 1,291,711 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 163,727,980 gallons. The average influent groundwater recovery rate from January 27 through February 24, 2012 was approximately 32.0 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on February 10, 2012 to complete quarterly, monthly, and bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon departure from the site on February 10, 2012.

Operation & Maintenance of the Implemented Corrective Measure  
Former Amphenol Facility  
Franklin, Indiana  
Page 2 of 2

---

IWM personnel mobilized to the site on February 24, 2012 to complete bi-weekly system operation and maintenance activities and quarterly system sampling activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on February 24, 2012.

**Quarterly Treatment System Sampling**

On February 24, 2012, influent samples from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 and a combined effluent sample were obtained to evaluate the groundwater treatment system. Each of the influent sample taps was allowed to run for at least 10 seconds. Prior to sampling, water flow from the tap was reduced to minimize turbulence and agitation. All samples were submitted to Pace Analytical Services, Inc. (Pace), located in Indianapolis, Indiana for volatile organic compound (VOC) analysis by SW-846 Method 8260B.

Laboratory analytical results from the February 24, 2012 quarterly system sampling activities indicated the presence of trichloroethene in groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. 1,1,1-Trichloroethane was detected in the groundwater sample obtained from recovery well RW-2. Cis-1,2-dichloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, and RW-5. Tetrachloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, RW-4, and RW-5. 1,1-Dichloroethane was detected in the groundwater sample obtained from recovery well RW-2. No constituents of concern were detected in the remedial system's effluent water sample.

Historic quarterly system sampling analytical results are summarized in **Table 1**. Laboratory data sheets are provided in **Attachment D**.

**Schedule of Activities**

Monthly and biweekly system operation and maintenance activities are scheduled for the month of March 2012. Site visits are scheduled for the weeks beginning March 5 and March 19, 2012. The information from these site inspections will be included in the March 2012 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting Group, LLC appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

**IWM CONSULTING GROUP, LLC**

Notes:

Results in micrograms per liter (ug/l).

(1) ND - Not Detected - analyte not detected above laboratory method detection limit.

(2) NS - Not Sampled, RW-1 not in operation during April 1998 and November 1997 sampling events.

E - Trichloroethane value for RW-1 during the November 13, 1995 sampling event is an estimated value only.

Notes:

Results in micrograms per liter (ug/l).

\* - Naphthalene and MTBE were detected at 16 and 17 ug/L, respectively; however, these detections are most likely due to laboratory artifacts or handling issues.

\*\* - Methylene chloride was detected at 5.9 ug/L, however, this detection was most likely due to a laboratory artifact.

**Notes:**

- Data prior to 4/12/96 was collected by EMCN.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

RE: Project: Amphenol / IN.AMP.11.05  
Pace Project No.: 5059033

Dear Mr. Parks:

Enclosed are the analytical results for sample(s) received by the laboratory on February 24, 2012. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read 'Kenneth Hunt'.

## QUALIFIERS

Project: Amphenol / IN.AMP.11.05  
Pace Project No.: 5059033

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

- L3      Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.  
M0      Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

Mr. Sam Waldo  
Director, Environmental Affairs  
AMPHENOL CORPORATION  
World Headquarters  
358 Hall Avenue  
Wallingford, CT 06492

**Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE**  
Former Amphenol Facility  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the February 24 through March 23, 2012 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

#### **Groundwater Level Measurements**

On March 9, 2012, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 8.52 feet below top of casing (TOC) in MW-9 to 17.55 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a groundwater contour map based on the March 9, 2012 depth to water measurements has been included as **Figure 2**.

#### **Groundwater Treatment System**

From February 24 through March 23, 2012, approximately 1,216,785 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 164,944,765 gallons. The average influent groundwater recovery rate from February 24 through March 23, 2012 was approximately 30.2 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on March 9, 2012 to complete monthly and bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon departure from the site on March 9, 2012.

Operation & Maintenance of the Implemented Corrective Measure  
Former Amphenol Facility  
Franklin, Indiana  
Page 2 of 2

---

IWM personnel mobilized to the site on March 23, 2012 to complete bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on March 23, 2012.

**Schedule of Activities**

Monthly and biweekly system operation and maintenance activities and semi-annual groundwater sampling activities are scheduled for the month of April 2012. Site visits are scheduled for the weeks beginning April 2 and April 16, 2012. The information from these site inspections will be included in the April 2012 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting Group, LLC appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

**IWM CONSULTING GROUP, LLC**

Christopher D. Parks, LPG  
Project Manager

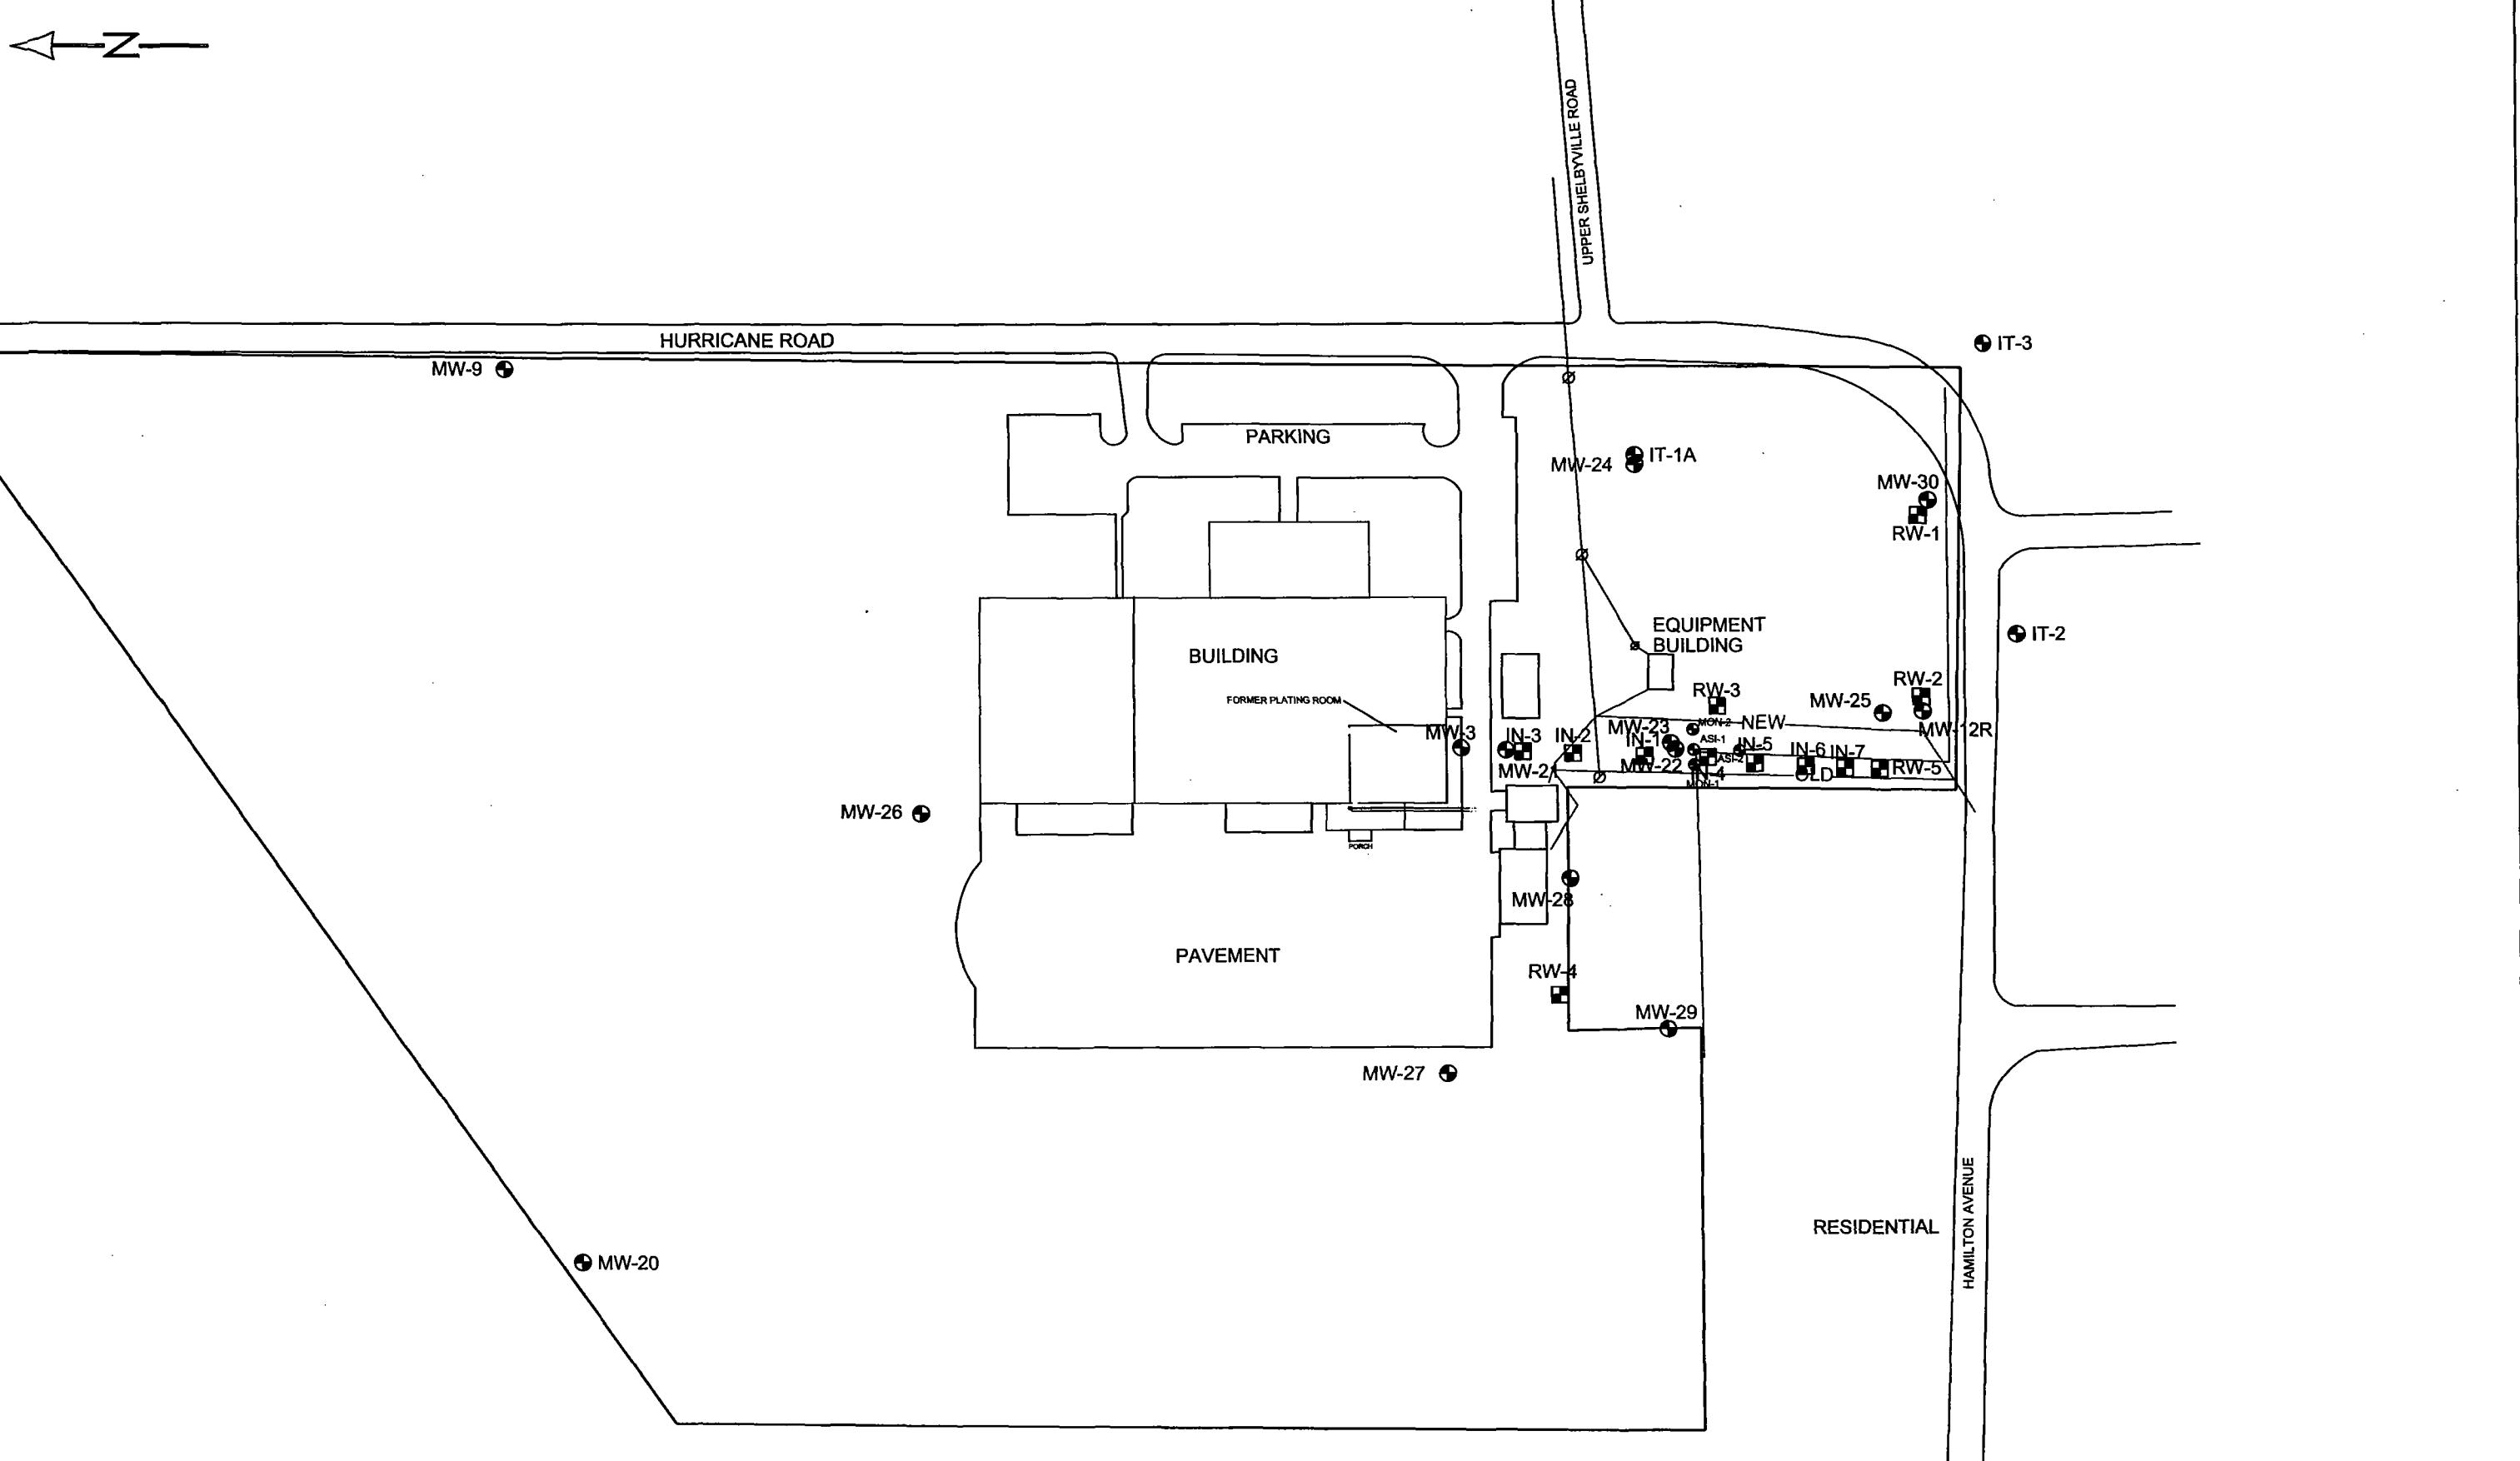

Bradley E. Gentry, LPG  
Senior Project Manager

**Notes:**

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

**Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED  
CORRECTIVE MEASURE**

Former Amphenol Facility  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the March 23 through April 20, 2012 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

**Groundwater Level Measurements**

On April 6, 2012, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 7.71 feet below top of casing (TOC) in MW-9 to 17.06 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a groundwater contour map based on the April 6, 2012 depth to water measurements has been included as **Figure 2**.

**Groundwater Treatment System**

From March 23 through April 20, 2012, approximately 1,308,163 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 166,252,928 gallons. The average influent groundwater recovery rate from March 23 through April 20, 2012 was approximately 32.4 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on April 6, 2012 to complete monthly and bi-weekly system operation and maintenance activities and semi-annual groundwater sampling activities. The groundwater recovery and treatment system was completely operational upon departure from the site on April 6, 2012.

---

IWM personnel mobilized to the site on April 20, 2012 to complete bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on April 20, 2012.

#### Semi-Annual Groundwater Sampling and Analysis

On April 6, 2012, groundwater samples were obtained from monitoring wells IT-2, IT-3, MW-12R, MW-20, MW-22, MW-28, MW-29, and MW-30 for VOC analysis to evaluate current groundwater quality at the site. Groundwater samples were collected using dedicated, disposable, bottom-loading bailers to reduce the risk of cross-contamination. Three-well volumes were purged prior to sample collection. Samples were submitted to Pace Analytical Services, Inc. (Pace) for VOC analysis using US EPA SW 846 Method 8260B. Groundwater sampling logs are provided in **Attachment D**.

The highest VOC concentrations were detected in the groundwater samples obtained from monitoring well MW-22 (847.4 µg/L total VOCs) located 30 feet northwest of recovery well RW-3 and monitoring well MW-12R (1,255.7 µg/L total VOCs) located adjacent to recovery well RW-2. Therefore, the groundwater recovery and treatment system is effectively targeting the area of greatest VOC concentration. The concentrations of dissolved VOCs in monitoring wells MW-12 and MW-22 decreased substantially following installation of the groundwater recovery and treatment system in 1996. Overall, total VOC concentrations in these wells have been relatively stable during operation of the treatment system from 2000 to 2012.

Trichloroethene was detected in monitoring wells IT-2, IT-3, MW-12R, MW-22, and MW-28. Cis-1,2-dichloroethene was detected in monitoring wells IT-2, MW-12R, and MW-22. 1,1,1-Trichloroethane was detected in monitoring wells MW-12R, MW-22, MW-28, and MW-30. Tetrachloroethene was detected in monitoring wells MW-12R, MW-22, and MW-28.

Both monitoring wells IT-2 and IT-3 are located down-gradient from the site. Overall, total dissolved VOC concentrations in monitoring wells IT-2 and IT-3 have decreased over time during operation of the groundwater recovery and treatment system. Total dissolved VOC concentrations in monitoring wells MW-12R and MW-30 have decreased since the startup of the remedial system in 1996. Total dissolved VOC concentrations decreased substantially in monitoring wells MW-22 and MW-28 during the initial startup of the recovery system in 1996 and have been decreasing during operation of the groundwater recovery and treatment system from 2000 to 2012. Tetrachloroethene and trichloroethene concentrations were reduced significantly (47% and 37%, respectively) in monitoring well MW-22 as part of a three month enhanced bioremediation pilot study conducted in early 2007. During the implementation of the full scale enhanced bioremediation activities (July 2010 through March 2011), tetrachloroethene concentrations decreased 22% in monitoring well MW-22. Post full scale enhanced bioremediation activities, tetrachloroethene concentrations have decreased an additional 39% in monitoring well MW-22.

The dissolved VOC concentrations observed in monitoring well MW-12R initially (October 2010) increased immediately after implementation of the full scale enhanced bioremediation. The reason for the increased dissolved VOC concentrations is because several combination groundwater and microbe injection points (IN-4, IN-5, IN-6, and IN-7) were installed immediately hydraulically up-gradient from this well and the injection points were able to “flush” the VOC impacted saturated soil, thus increasing the dissolved VOC concentrations while simultaneously decreasing the adsorbed VOC concentrations. Furthermore, the dissolved VOCs were drawn to and recovered by hydraulically down-gradient recovery wells RW-2 (adjacent to MW-12R) and RW-5 (approximately 45 feet west of MW-12R). Since monitoring well MW-12R is located between these two recovery wells, this explains why the dissolved VOC concentrations increased

Operation & Maintenance of the Implemented Corrective Measure  
**Former Amphenol Facility**  
Franklin, Indiana  
Page 3 of 3

immediately after start-up of the full scale enhanced bioremediation activities. It should be noted that the dissolved VOCs displayed a decrease in concentrations during the April 2011 groundwater sampling event. During the October 2011 event, a substantial rebound of dissolved VOC concentrations was observed. Dissolved VOC concentrations in monitoring well MW-12R decreased approximately 58% from the October 2011 sampling event to the April 2012 sampling event.

No VOCs were detected in the groundwater samples obtained from monitoring wells MW-20 and MW-29.

A trip blank and a field duplicate sample (MW-22) were obtained per IDEM Minimum Data Documentation Requirements dated February 13, 2003. The trip blank and the duplicate sample were analyzed for VOCs. The trip blank was below laboratory detection limits for all constituents and the duplicate analysis was relatively consistent with the sample which was duplicated. Groundwater sampling field logs are provided in **Attachment D**. Laboratory data sheets are provided in **Attachment E**. A summary of groundwater analytical results is included in **Table 1**.

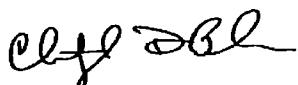

**Schedule of Activities**

Quarterly, monthly, and biweekly system operation and maintenance activities and semi-annual groundwater sampling activities are scheduled for the month of May 2012. Site visits are scheduled for the weeks beginning April 30 and May 14, 2012. The information from these site inspections will be included in the May 2012 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting Group, LLC appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

**IWM CONSULTING GROUP, LLC**

Notes:

Results in micrograms per liter (ug/l).

ND - Not Detected - analyte not detected above laboratory method detection limit of 5.0 ug/L.

Samples were analyzed for VOCs using USEPA Method 8260 B.

NA - Not Available.

J - Estimated value.

**Notes:**

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

RE: Project: Amphenol-AMP11-06  
Pace Project No.: 5061177

Dear Mr. Parks:

Enclosed are the analytical results for sample(s) received by the laboratory on April 06, 2012. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read 'Kenneth Hunt'.

## QUALIFIERS

Project: Amphenol-AMP11-06

Pace Project No.: 5061177

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

RE: Project: Amphenol 11-05  
Pace Project No.: 5054970

Dear Mr. Parks:

Enclosed are the analytical results for sample(s) received by the laboratory on November 18, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Kenneth Hunt".

## QUALIFIERS

Project: Amphenol 11-05  
Pace Project No.: 5054970

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

### ANALYTE QUALIFIERS

- 1d      Several compounds are outside of acceptance limits for RPD value. Refer to batch QC for system control. grm 11-29-11  
L3      Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

RE: Project: Amphenol / IN.AMP.11.05  
Pace Project No.: 5059033

Dear Mr. Parks:

Enclosed are the analytical results for sample(s) received by the laboratory on February 24, 2012. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read 'Kenneth Hunt'.

## QUALIFIERS

Project: Amphenol / IN.AMP.11.05  
Pace Project No.: 5059033

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

L3      Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

M0      Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

Mr. Chris Parks  
IWM Consulting  
7428 Rockville Road  
Indianapolis, IN 46214

RE: Project: Amphenol-AMP11-06  
Pace Project No.: 5061177

Dear Mr. Parks:

Enclosed are the analytical results for sample(s) received by the laboratory on April 06, 2012. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read 'Kenneth Hunt'.

## QUALIFIERS

Project: Amphenol-AMP11-06

Pace Project No.: 5061177

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

## Container Codes

DG9H	40mL HCL amber voa vial	AF	Air Filter	BP1N	1 liter HNO3 plastic	DG9P	40mL TSP amber vial
AG1U	1liter unpreserved amber glass	AG1H	1 liter HCL amber glass	BP1S	1 liter H2SO4 plastic	DG9S	40mL H2SO4 amber vial
WGFU	4oz clear soil jar	AG1S	1 liter H2SO4 amber glass	BP1U	1 liter unpreserved plastic	DG9T	40mL Na Thio amber vial
R	terra core kit	AG1T	1 liter Na Thiosulfate amber gl	BP1Z	1 liter NaOH, Zn, Ac	DG9U	40mL unpreserved amber vial
BP2N	500mL HNO3 plastic	AG2N	500mL HNO3 amber glass	BP2A	500mL NaOH, Asc Acid plastic	I	Wipe/Swab
BP2U	500mL unpreserved plastic	AG2S	500mL H2SO4 amber glass	BP2O	500mL NaOH plastic	JGFU	4oz unpreserved amber wide
BP2S	500mL H2SO4 plastic	AG2U	500mL unpreserved amber gla	BP2Z	500mL NaOH, Zn Ac	U	Summa Can
BP3N	250mL HNO3 plastic	AG3U	250mL unpreserved amber gla	BP3A	250mL NaOh, Asc Acid plastic	VG9H	40mL HCL clear vial
BP3U	250mL unpreserved plastic	BG1H	1 liter HCL clear glass	BP3C	250mL NaOH plastic	VG9T	40mL Na Thio. clear vial
BP3S	250mL H2SO4 plastic	BG1S	1 liter H2SO4 clear glass	BP3Z	250mL NaOH, Zn Ac plastic	VG9U	40mL unpreserved clear vial
AG3S	250mL H2SO4 glass amber	BG1T	1 liter Na Thiosulfate clear gla	C	Air Cassettes	VSG	Headspace septa vial & HCL
AG1S	1 liter H2SO4 amber glass	BG1U	1 liter unpreserved glass	DG9B	40mL Na Bisulfate amber vial	WGFX	4oz wide jar w/hexane wipe
BP1U	1 liter unpreserved plastic	BP1A	1 liter NaOH, Asc Acid plastic	DG9M	40mL MeOH clear vial	ZPLC	Ziploc Bag
